# Risk Profile of the Scheme

Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:

# A. Risk factors associated with investing in equities and equity related instruments

- Equity shares and equity related instruments are volatile and prone to price fluctuations
  on a daily basis. Investments in equity shares and equity related instruments involve a
  degree of risk and investors should not invest in the Scheme unless they can afford to
  take the risks.
- Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature
  and carry a larger amount of liquidity risk, in comparison to securities that are listed on
  the exchanges. Investment in such securities may lead to increase in the scheme portfolio
  risk.
- While securities that are listed on the stock exchange carry lower liquidity risk, the ability
  to sell these investments is limited by the overall trading volume on the stock exchanges
  and may lead to the Scheme incurring losses till the security is finally sold.

#### B. Risk factors associated with investing in fixed income securities

- The Net Asset Value (NAV) of the Scheme, to the extent invested in Debt and Money Market instruments, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.
- Investment in Debt instruments are subject to varying degree of credit risk or default (i.e. the risk of an issuer's inability to meet interest or principal payments on its obligations) or any other issues, which may have their credit ratings downgraded. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security values. The Investment Manager will endeavour to manage credit risk through in-house credit analysis. This may increase the risk of the portfolio.The Investment Manager will endeavour to manage credit risk through in-house credit analysis.

- Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- Different types of fixed income securities in which the Scheme would invest as given in
  the Scheme Information Document carry different levels and types of risk. Accordingly,
  the Scheme risk may increase or decrease depending upon its investment pattern. e.g.
  corporate bonds carry a higher level of risk than Government securities. Further even
  among corporate bonds, AAA rated bonds are comparatively less risky than AA rated
  bonds.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated /
  unrated securities offering higher yields as well as zero coupon securities that offer
  attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates and are subject to issuer default risk. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- Scheme's performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.
- Prepayment Risk: Certain fixed income securities give an issuer the right to call back
  its securities before their maturity date, in periods of declining interest rates. The
  possibility of such prepayment may force the Scheme to reinvest the proceeds of such
  investments in securities offering lower yields, resulting in lower interest income for the
  Scheme.
- Reinvestment Risk: This risk refers to the interest rate levels at which cash flows
  received from the securities in the Scheme are reinvested. The additional income from
  reinvestment is the "interest on interest" component. The risk is that the rate at which
  interim cash flows can be reinvested may be lower than that originally assumed.
- Settlement risk: Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the Scheme's portfolio.
- The Scheme at times may receive large number of redemption requests, leading to an
  asset-liability mismatch and therefore, requiring the investment manager to make a
  distress sale of the securities leading to realignment of the portfolio and consequently
  resulting in investment in lower yield instruments.

#### C. Risk factors associated with investment in Tri-Party Repo:

The Fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the Fund in government

securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL).

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from Triparty Repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The Fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the Fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

# D. RISK FACTORS ASSOCIATED WITH INVESTING IN NON- CONVERTIBLE PREFERENCE SHARES

- Credit Risk Credit risk is the risk that an issuer will be unable to meet its obligation
  of payment of Income Distribution Cum Withdrawal and/ or redemption of principal
  amount on the due date. Further, for non-cumulative preference shares, issuer also
  has an option to not pay Income Distribution Cum Withdrawal on preference shares
  in case of inadequate profits in any year.
- **Liquidity Risk** The preference shares generally have limited secondary market liquidity and thus we may be forced to hold the instrument till maturity.
- Unsecured in nature Preference shares are unsecured in nature and rank lower than secured and unsecured debt in hierarchy of payments in case of liquidation.
   Thus, there is significant risk of capital erosion in case the company goes into liquidation.

#### E. RELATED TO JM MIDCAP FUND

While Small & Mid-cap stocks gives one an opportunity to go beyond the usual large blue chip stocks and present possible higher capital appreciation, it is important to note that Small & Mid-cap stocks can be riskier and more volatile on a relative basis. Therefore, the risk levels of investing in Small & Midcap stocks are more than investing in stocks of large well established companies. It should be noted that over a period of time, Small, Mid and Large cap stocks have demonstrated different levels of volatility and investment returns. And it is important to note that generally, no one class consistently outperforms the others.

F. Risk related to investing in debt / bonds / money market instruments / units of liquid / money market / debt mutual fund schemes:

## a) Interest Rate Risk:

As with all debt securities, changes in interest rates will affect the NAVs of the Scheme as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long term securities generally fluctuate more in response to interest rate changes than of shorter-term securities. Interest rate movements in the Indian debt markets can be volatile leading to the possibility of large price movements up or down in debt and money market securities and thereby to possibly large movements in the NAV.

#### b) Liquidity or Marketability Risk:

This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of these investments. Different segments of the Indian financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances.

The length of time for settlement may affect the Scheme in the event it has to meet an inordinately large number of redemption or of restructuring of the Scheme's investment portfolio.

#### c) Credit Risk:

Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk, debentures are sold at a yield spread above those offered on treasury securities which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

#### d) Reinvestment Risk:

This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme or from maturities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested will fall.

#### e) Rating Migration Risk:

Fixed income securities are exposed to rating migration risk, which could impact the price on account of change in the credit rating. For example: One notch downgrade of a AAA rated issuer to AA+ will have an adverse impact on the price of the security and viceversa for an upgrade of a AA+ issuer

### f) Basis Risk (Interest - rate movement):

During the life of a floating rate security or a swap, the underlying benchmark index may become less active and may not capture the actual movement in interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.

#### q) Pre-payment Risk:

Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

#### h) Spread Risk:

In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

i) Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

#### G. Some of the other risks of investing in debt and money market securities are:

- a. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- b. The Scheme at times may receive large number of redemption requests, leading to an asset- liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments
- c. Investment in unrated instruments may involve a risk of default or decline in market value higher than rated instruments due to adverse economic and issuer-specific developments. Such investments display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for unrated investments tends to be more volatile and such securities tend to be less liquid than rated debt securities.
- d. Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Schemes.

#### H. Risks associated with Securities Lending:

In case the Scheme undertakes stock lending under the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

### I. Risks Associated with investing IN Tri Party Repo Through CCIL (TREPS)

The Fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments.

CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall".

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last recomputation of the Default Fund or specified amount, whichever is lower.

Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

#### J. Redemption Risk

As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or a restructuring of the Scheme.

#### K. Risk relating to Derivatives

- i) The Scheme may use various derivative products as permitted by the Regulations. In the derivative markets there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to manage the risks as a result of the failure of the counterparty to comply with the terms of the derivative contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives, credit risk where the danger is that of a counterparty failing to honour its commitment, liquidity risk where the danger is that the derivatives cannot be sold at prices that reflect the underlying assets, rates and indices and price risk where the market price may move in adverse fashion.
- ii) The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- iii) Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- Credit Risk: The credit risk in derivative transaction is the risk that the counter party
  will default on its obligations and is generally low, as there is no exchange of principal
  amounts in a derivative transaction.
- Market Risk: Market movements may adversely affect the pricing and settlement derivatives.
- **Illiquidity Risk:** This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

# L. Risk Factors Associated With Processing Of Transaction Through Stock Exchange Mechanism:

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE, on any Business Day will depend upon the modalities of processing viz. collection of application form, Account opening form, cancelled cheque, KYC documentation, order processing/settlement, etc.

upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

#### M. Risk factors associated with Reits and Invits

**Price Risk:** Securities/Instruments of REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices is a fluctuation in general market conditions, factors and forces affecting capital market, Real Estate and Infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures.

**Interest Rate Risk:** Securities/Instruments of REITs and InvITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.

**Credit Risk:** Credit risk means that the issuer of a REIT/InvIT security/ instrument may default on interest payment or even on paying back the principal amount on maturity. Securities/ Instruments of REITs and InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.

**Liquidity Risk:** This refers to the ease with which securities/instruments of REITs/InvITs can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities/instruments for which a liquid market exists. As these products are new to the market they are likely to be exposed to liquidity risk.

**Reinvestment Risk:** Investments in securities/instruments of REITs and InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or Income Distribution Cum Withdrawal pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

**Legal and Regulatory Risk:** The regulatory framework governing investments in securities/instruments of REITs and InvITs comprises a relatively new set of regulations and is therefore untested, interpretation and enforcement by regulators and courts involves uncertainties. Presently, it is difficult to forecast as to how any new laws, regulations or standards or future amendments will affect the issuers of REITs/InvITs and the sector as a whole. Furthermore, no assurance can be given that the regulatory system will not change in a way that will impair the ability of the Issuers to comply with the regulations, conduct the business, and compete effectively or make distributions.

#### N. Risk factors associated with Segregated Portfolio

- Unit holders holding units of segregated portfolio may not be able to liquidate their holdings till recovery of money from the issuer.
- Security in the segregated portfolio may not realize any value.
- Listing of any units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.
- The trading price of units on the stock exchange may be significantly lower than the prevailing Net Asset Value (NAV) of the segregated portfolio.

For details on risk factors and risk mitigation measures, please refer SID.

### Plans/Options

The Scheme offers two plans:

- JM Midcap Fund Regular Plan
- JM Midcap Fund Direct Plan

Each Plan offers two options viz., Income Distribution cum Capital Withdrawal (IDCW)\* & Growth Option

The Income Distribution cum Capital Withdrawal option will offer investors the facilities of: (a) Payout of Income Distribution cum Capital Withdrawal Option/IDCW (Payout), (b) Reinvestment of Income Distribution cum Capital Withdrawal Option/IDCW (Reinvestment). The options under the Scheme will have a common portfolio.

\*Amounts under IDCW option can be distributed out of investors capital (equalization reserve), which is part of sale price that represents realized gains. However, investors are requested to note that amount of distribution under IDCW option is not guaranteed and subject to availability of distributable surplus.

No Income Distribution Cum Capital Withdrawal under Income Distribution Cum Capital Withdrawal option shall be distributed for those unit holders opted for payout where such Income Distribution Cum Capital Withdrawal on a single payout is less than Rs. 100/-. Consequently, such Income Distribution Cum Capital Withdrawal (less than Rs.100/-) shall be compulsorily re-invested.

Under these options, the Trustees of the Fund reserve the right to declare Income Distribution cum Capital Withdrawal (income distribution) /IDCW in the respective Income Distribution cum Capital Withdrawal (income distribution) /IDCW options of the Scheme, subject to availability of distributable surplus. IDCW payout will be lower to the extent of statutory levies, as applicable.

The Trustees to JM Financial Mutual Fund reserves the right to change/modify the above provisions at a later date. It is clarified that the minimum investment is applicable at the respective Options/ Sub-options level i.e. Growth, Income Distribution cum Capital Withdrawal and will be considered after taking into account permissible DD charges, stamp duty.

#### **ADDITIONAL PLANS**

The Trustees may permit introduction of one or more plans that may be envisaged at a later date under the scheme in terms of Para-no 2.3 of SEBI Master Circular depending upon the market conditions prevailing at the time of launch of the plan(s) and taking into consideration the interests of the unitholders and subject to the SEBI regulations. Investors will be suitably informed by publishing a notice in a newspaper/addendum or through any other means as the Trustee may be considered appropriate.

For detailed disclosure on default plans and options, kindly refer SAI.

In respect of valid applications received after 3.00 p.m. (IST) by the Fund, the closing NAV of the next business day shall be applicable.

#### SIP/STP/Switch-in Transactions

- The NAV for SIP & STP instalments will be allotted based on the credit of funds into the Scheme's account for the respective instalments before the cut off time i.e. 3.00 p.m. irrespective of the SIP/STP instalments' due dates opted by the investors as the same will only be meant for the purpose of initiating the SIP/STP transactions.
- The NAVs for Switch-in transactions will be based on transfer of funds into the Bank Account of the target Scheme as per the redemption pay-out service standards of the switch-out scheme subject to the time stamping of the switch transactions upto the cut-off timings of 3.00 p.m.

For faster realisation of the funds, the investors are requested to use electronic modes of payments.

It is clarified that the cut off timings will also be applicable to investments made through "sweep" mode.

### Transactions through online facilities / electronic modes:

The time of transaction done through various online facilities / electronic modes offered by the Online Channel Partners of the AMC, for the purpose of determining the applicability of NAV, would be the time when the request for purchase / sale / switch of units is received in the servers of AMC/RTA.

In case of transactions through Online facilities / electronic modes, there may be a time lag of few days between the amount of subscription being debited to investor's bank account and the subsequent credit into the respective Scheme's bank account. This lag may impact the applicability of NAV for transactions where NAV is to be applied, based on actual realization/receipt of funds by the Scheme. Under no circumstances will JMF AMC or its bankers or its service providers be liable for any lag / delay in realization of funds and consequent pricing of units.

The AMC has the right to amend cut off timings of transactions received through online channels within the cut off time stipulated by SEBI (MF) Regulations for the smooth and efficient functioning of the Scheme.

### **Exchange Platforms & MFU:**

The cut – off timing and applicability of Net Asset Value (NAV) shall be subject to the guidelines issued by SEBI in this regard. With respect to investors who transact through Stock Exchange Platforms (i.e. BSE/NSE) or MFU, the applicable NAV shall be reckoned on the basis of the time stamping as evidenced by confirmation slip given by Stock Exchange/ MFU mechanism, and subject to receipt of funds by the AMC/Fund before the cut – off time of the Scheme for purchase transactions. These platforms are authorized Point of Acceptance for the limited purpose of time-stamping the transactions.

Illustration of the calculation of sale and repurchase price of the units of the Mutual Fund:

If the applicable NAV is Rs. 10 and the exit load is 1%, then the redemption price will be: Rs. 10\*(1-0.01) = Rs. 9.9000.

Investors who hold units in demat form and wish to redeem their units, kindly refer to the redemption procedure set out in the SID.

#### **Employee Unique Identification Number (EUIN):**

SEBI has made it compulsory for every employee/ relationship manager/ sales person of the distributor of Mutual Fund products to quote the EUIN obtained by him/her from AMFI in the Application Form. EUIN, particularly in advisory transactions, would assist in addressing any instance of mis-selling even if the employee/relationship manager/sales person later leaves the employment of the distributor. Hence, if your investments are routed through a distributor please ensure that the EUIN is correctly filled up in the Application Form.
