I. INTRODUCTION

A. RISK FACTORS

i. STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

ii. SCHEME SPECIFIC RISK FACTORS

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

Risks associated with investments in Mid Cap companies

While investing in mid cap stocks give one an opportunity to go beyond the usual large blue chip stocks, it is important to note that stocks of mid cap companies are more volatile and less liquid than the stocks of large cap companies. Over a period of time, stocks of mid and large cap companies have demonstrated different level of volatility and returns. And no single market cap category has consistently outperformed the other.

Risks associated with investments in Equities

- Equity and equity related securities may be volatile and hence are prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors.
- Investments in equity and equity related securities involve a high degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to investors, including put options. The AMC may choose to invest in unlisted securities within the regulatory limit. The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected negatively if they have to be sold prior to their target date of divestment. The value of unlisted security may go down before the divestment date and selling these securities before the divestment date may lead to losses in the portfolio.

Risks associated with investments in Fixed Income Securities

- **Interest-Rate Risk:** Fixed income securities such as government bonds, corporate bonds, and money market instruments and derivatives run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.
- **Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.
- **Basis Risk:** Basis risk arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.
- **Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- **Counterparty Risk:** - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Risks associated with unrated instruments:** - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.
- **Duration Risk:** - Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually Individual duration of the fixed income instruments in the portfolio is calculated and the portfolio duration is the weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.

Performance Risk:

Performance risk refers to the risk of a scheme being unable to generate returns matching / above the returns of the scheme's benchmark. It would also mean the scheme underperforming against its peer set of other mutual fund schemes having similar portfolios, scheme classification, objective, benchmark and asset allocation. These risks could arise due to a variety of market and economic activities, government policies, global economic changes, currency fluctuations, tax policies, political changes, corporate actions and investors' behaviour.

Risks associated with Real Estate Investment Trust (REIT) and Infrastructure Investment Trust (InvIT)

1. **Risk of lower than expected distributions:** The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/INVIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things:
 - success and economic viability of tenants and off-takers
 - economic cycles and risks inherent in the business which may negatively impact
 - valuations, returns and profitability of portfolio assets
 - force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
 - debt service requirements and other liabilities of the portfolio assets
 - fluctuations in the working capital needs of the portfolio assets
 - ability of portfolio assets to borrow funds and access capital markets
 - changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
 - amount and timing of capital expenditures on portfolio assets
 - insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents.
 - taxation and other regulatory factors
2. **Price-Risk:** The valuation of the REIT/InvIT units may fluctuate based on economic conditions, fluctuations in markets (eg. real estate) in which the REIT/InvIT operates and the resulting impact on the value of the portfolio of assets, regulatory changes, force majeure events etc. REITs & InvITs may have volatile cash flows. As an indirect shareholder of portfolio assets, unit holders rights are subordinated to the rights of creditors, debt holders and other parties specified under Indian law in the event of insolvency or liquidation of any of the portfolio assets.
3. **Interest-Rate Risk:** Generally, there would be inverse relationship between the interest rates and the price of units i.e. when interest rates rise, prices of units fall and when interest rates drop, such prices increase.
4. **Liquidity Risk:** This refers to the ease with which REIT/InvIT units can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the units could be infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

Risks associated with investments in Derivatives

- **Market Risk:** Derivatives are traded in the market and are exposed to losses due to change in the prices of the underlying and/or other assets and, change in market conditions and factors. The

volatility in prices of the underlying may impact derivative instruments differently than its underlying.

- **Liquidity Risk:** This risk arises from the inability to sell derivatives at prices that reflect the underlying assets/ rates/ indices, lack of availability of derivative products across different maturities and with various risk appetite.
- **Valuation Risk:** This is the risk of mis-pricing or improper valuation of derivatives due to inadequate trading data with good volumes.
- **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for example, when a bond is hedged using a derivative, the change in price of the bond and the change in price of the derivative may not be fully correlated leading to basis risk in the portfolio. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Example: Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve or if there is a mismatch in the tenor of the swap and the fixed income security.
- **Credit Risk:** The Credit Risk is the risk that the counter party will default in its obligations and is generally small as in a derivative transaction there is generally no exchange of the principal amount.
- **Operational / Systemic Risk:** This is the risk arising due to failure of operational processes followed by the exchanges and Over The Counter (OTC) participants for the derivatives trading.
- **Counterparty Risk:** Counterparty risk is the risk that losses will be incurred due to the default by the counterparty for OTC derivatives.
- **Exposure Risk:** An exposure to derivatives in excess of the hedging requirements can lead to losses. An exposure to derivatives can also limit the profits from a plain investment transaction.
- **Interest Rate Risk:** This risk arises from the movement of interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.
- **Systemic Risk:** The risk inherent in the capital market due to macro-economic factors like Inflation, GDP, Global events.
- **Implied Volatility:** The estimated volatility of an underlying security's price and derivatives price

Risks attached with the use of derivatives

Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. It requires not only understanding the stocks and bonds but the derivatives as a whole. Derivatives require the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

Risk associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However, this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme.

Risks associated with ‘Right to limit redemptions’

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph “Right to Limit Redemptions” for further details including the procedure to be followed while imposing restriction on redemptions.

Risks Factors associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

B. REQUIREMENT OF MINIMUM UNITHOLDERS IN THE SCHEME

The Scheme shall have a minimum of 20 Unitholders and no single Unitholder shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 Unitholders in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The aforesaid conditions should be complied with in each subsequent calendar quarter on an average basis. In case the Scheme does not have a minimum of 20 Unitholders on an ongoing basis for each calendar quarter, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. If there is a breach of the 25% limit by any Unitholder over the quarter, a rebalancing period of one month would be allowed and thereafter the Unitholder who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said Unitholder to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic Redemption by the Mutual Fund on the Applicable NAV on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The fund manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long term perspective. The Scheme will follow a bottom up approach to pick stocks across the sectors. Stock picking will be based on the industry, macro and long term potential of the business. The focus will be to build an appropriate portfolio to capture the growth opportunities in India and identify companies which can grow to become the next leaders in their segment.

The Scheme by utilizing a holistic risk management strategy will endeavour to manage risks associated with investing in equity markets. The Scheme has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks:

- a. Quality risk – Risk of investing in unsustainable/weak companies
- b. Price risk - Risk of overpaying for a company
- c. Liquidity risk- High impact cost of entry and exit
- d. Volatility risk –Volatility in price due to company or portfolio specific factors
- e. Event risk - Price risk due to a company/sector specific or market event

Derivatives Strategy

1. Equity Derivatives Strategy:

The Scheme may invest in various derivative instruments which are permissible under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index). Derivatives are financial contracts of pre-determined fixed

duration, whose values are derived from the value of an underlying primary financial instrument such as interest rates, exchange rates, commodities and equities.

The following section describes the concepts and examples of derivatives that may be used by the fund manager. The strategies and illustrations provided below are only for the purpose of understanding the concept and uses of derivative instruments.

i. Index Futures

Index Futures maybe used by the Fund to hedge against market downturns (shorting the index) or benefit from a bullish outlook on the market (going long on the index).

Example on how it could be used: Assume Nifty near month future contract is trading at Rs. 7,500, and the fund manager has a view that nifty will depreciate going forward; the Scheme can initiate a sale transaction of Nifty futures at the above said rate without holding a underlying long equity position. Once the price falls and let's assume after 15 days the Nifty falls to 7400, the Scheme can initiate a square-up transaction by buying the said futures and book a profit of Rs. 100.

In a similar way, if the fund manager has a view that nifty will appreciate going forward, the Scheme can initiate a long transaction without an underlying cash/ cash equivalent subject to the extant regulations.

ii. Index Options

Index options offers the Fund the opportunity to either capitalize on an expected market move or to protect holdings in the underlying instruments. The underlying in the case of Index options are indices.

A. Buy Call

The fund, to benefit from anticipated uptrend in broad markets, from time to time can buy call options. A long call option will give the Fund the option but not the obligation to buy the Index at the strike price. Stop loss is not defined and will be monitored by the investment team.

Example on how it could be used

Suppose an investor buys a Call option on 1 lot of Nifty 50- Nifty (Lot Size: 75 units)

- Nifty index (European option).
- Nifty 1 Lot Size: 75 units
- Spot Price (S): 7500
- Strike Price (x): 7550 (Out-of-Money Call Option)
- Premium: 80

Total Amount paid by the investor as premium $[75*80] = 6000$

There are two possibilities i.e. either the index moves up over the strike price or remains below the strike price.

1. Scenario 1- The Nifty index goes up

An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves up to 7600 in the spot market and the premium has moved to Rs 150 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty call option as the option now is In the Money.

His gains are as follows:

- Nifty Spot: 7600
- Current Premium: Rs.150
- Premium paid: Rs.80
- Net Gain: Rs.150- Rs.80 = Rs.70 per unit
- Total gain on 1 lot of Nifty = Rs.5250 (75*70)

2. Scenario 2 - The Nifty index moves to any level below 7500

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.6000 (Loss is capped to the extent of Premium Paid)
(Rs 80 Premium paid*Lot Size: 75 units)

3. Simple Scenario for holding on to expiry: The fund buys a call option at the strike price of say Rs.7500 and pays a premium of say Rs. 80, the fund would earn profits if the market price of the stock at the time of expiry of the option is more than 7580 being the total of the strike price and the premium thereon. If on the date of expiry of the option the stock price is below Rs 7500, the fund will not exercise the option while it loses the premium of Rs 80.

B. Buy Put

The Fund may buy index put options to hedge existing portfolios. The put option will give the Fund the flexibility to sell the portfolio at the strike price if the index falls below the strike price. The Fund will have to pay a premium to the option writer to buy this put option. There is no defined stop loss as the same will be monitored by the investment team.

Example on how it could be used

Suppose an investor buys a Put option on 1 lot of Nifty 50- Nifty (Lot Size: 75 units)

- Nifty index (European option).
- Nifty 1 Lot Size: 75 units
- Spot Price (S): 7500
- Strike Price (x): 7450 (Out-of-Money Call Option)
- Premium: 80

Total Amount paid by the investor as premium [75*80] =6000

There are two possibilities i.e. either the index moves down from the strike price or goes above the strike price.

1. Scenario 1- The Nifty index goes down

An investor sells the Nifty Option described above before expiry:

Suppose the Nifty index moves down to 7400 in the spot market and the premium has moved to Rs 150 and there are 15 days more left for the expiry. The investor decides to reverse his position in the market by selling his 1 Nifty put option as the option now is In the Money.

His gains are as follows:

- Nifty Spot: 7600
- Current Premium: Rs.150
- Premium paid: Rs.80
- Net Gain: Rs.150- Rs.80 = Rs.70 per unit

- Total gain on 1 lot of Nifty = Rs.5250 (75*70)

2. Scenario 2 - The Nifty index moves to any level above 7500

Then the investor does not gain anything but on the other hand his loss is limited to the premium paid:

Net Loss is Rs.6000 (Loss is capped to the extent of Premium Paid)
(Rs 80 Premium paid*Lot Size: 75 units)

3. Simple Scenario for holding on to expiry: The fund buys a Put Option at Rs 7500 by paying a premium of say Rs 80. If the stock price goes down to Rs. 7400, the fund would protect its downside and would only have to bear the premium of Rs 80 instead of a loss of Rs 100 whereas if the stock price moves up to say Rs. 7600 the fund may let the Option expire and forego the premium thereby capturing Rs. 100 upside after bearing the premium of Rs. 80.

iii. Stock Futures

Buy Stock Futures

The Fund can buy stock futures to realize a positive outlook on the stock or to rebalance sector positions. There will be no defined stop loss given the high volatility and the same will be monitored by the investment team.

iv. Stock Options

A. Buy Call

To capitalize positive view on a stock or to rebalance sector positions, the Fund may buy call options on the stock against the payment of a premium. Buying a call option provides the Fund the option but not the obligation to buy the stock at the strike price. There will be no defined stop loss and the same shall be monitored by the investment team.

B. Buy Put

To implement a negative view on the stock or to hedge against downside in an existing stock holding or to rebalance sector positions, the Fund may purchase stock put options against payment premium. This gives the option but not the obligation to the Fund to sell the stock if stock prices falls below the strike price.

2. Fixed Income Derivatives Strategy:

The Scheme may use Derivative instruments like interest rate swaps like Overnight Indexed Swaps (“OIS”), forward rate agreements, interest rate futures (as and when permitted) or such other Derivative instruments as may be permitted under the applicable regulations. Derivatives will be used for the purpose of hedging, and portfolio balancing or such other purpose as may be permitted under the regulations and Guidelines from time to time.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Fund will use Derivative instruments for the purpose of hedging and portfolio balancing. The Fund may also use derivatives for such purposes as maybe permitted from time to time. Further, the guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual

Fund.

IRS and FRA do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in Derivatives will be in accordance with the extant Regulations / guidelines. Presently Derivatives shall be used for hedging and / or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Scheme at a lower cost. e.g. if buying a 2 Yr FBIL Mibor based instrument and receiving the 2 Yr swap rate yields better return than the 2 Yr AAA corporate, the Scheme would endeavor to do that. Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the Derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Interest Rate Swaps:

The Indian markets have faced high volatility in debt markets. An interest rate swap is a contractual agreement between two counter-parties to exchange streams of interest amount on a notional principal basis. In this, one party agrees to pay a fixed stream of interest amount against receiving a variable or floating stream of interest amount. The variable or floating part is determined on a periodical basis.

Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.

Example

Entity A has a Rs.50 crores, 3 month asset which is being funded through call. Entity B, on the other hand, has deployed in overnight call money market Rs.50 crores, 3 month liability. Both the entities are taking on an interest rate risk.

To hedge against the interest rate risk, both the entities can enter into a 3 month swap agreement based on say FBIL MIBOR (Financial Benchmarks India Private Limited Mumbai Inter Bank Offered Rate). Through this swap, entity B will receive a fixed pre-agreed rate (say 7%) and pay FBIL MIBOR (“the benchmark rate”) which will neutralize the interest rate risk of lending in call. Similarly, entity A will neutralize its interest rate risk from call borrowing as it will pay 8% and receive interest at the benchmark rate.

Assuming the swap is for Rs.50 crores 1 January to 1 April, Entity A is a floating rate receiver at the overnight compounded rate and Entity B is a fixed rate receiver. On a daily basis, the benchmark rate fixed by NSE will be tracked by them.

On April 1, they will calculate as explained below:

Entity A is entitled to receive daily compounded call rate for 91 days and pay 7% fixed.

Entity B is entitled to receive interest on Rs.50 crores @ 7% i.e. Rs. 87.26 lacs, and pay the compounded benchmark rate.

Thus on December 1, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 87.26 lacs, entity B will pay entity A the difference and vice versa.

The above example illustrates the use of Derivatives for hedging and optimizing the investment portfolio. Swaps have their own drawbacks like credit risk, settlement risk. However, these risks are substantially reduced as the amount involved is interest streams and not principal.

Forward Rate Agreement (FRA)

A FRA is referred to by the beginning and end dates of the period covered in the transaction. A 2x5 FRA means the 3 month rate starting 2 months from now.

For example, a corporate has a three month fixed liability three months from now. To meet this liability the company enters into a 3x6 FRA where it receives 7.25% for 100 crore and fixes the interest cost for the 3-6 months period. If the actual three month rate three months from now is 7% the corporate has gained 25 bps through interest cost. As the settlement is done at the beginning of the period, the net present value of the savings needs to be calculated using the 3 month rate as the discount rate.

Interest savings = INR 100 crores * 25 bps * 92/365 (assuming 92 days in the 3 month period and 365 days for the year) = INR 6,30,137.

Settlement Amount = INR 6,30,137 / (1+ 7%*92/365) = INR 6,19,212

Interest Rate Futures

Assume that ABC hold GOI securities, hence is exposed to the risk of rising interest rates, which in turn results in the reduction in the value of their portfolio. So in order to protect against a fall in the value of their portfolio due to falling bond prices, they can take short position in IRF contracts.

Example:

Date: 01-April-2023

Spot price of GOI Security: Rs 100.05

Futures price of IRF Contract: Rs 100.12

On 01-April-2023 ABC bought 2000 GOI securities from spot market at Rs 100.05. He anticipates that the interest rate will rise in near future. Therefore to hedge the exposure in underlying market he may sell May 2023 Interest Rate Futures contracts at Rs. 100.12.

On 16-May-2023 due to increase in interest rate:

Spot price of GOI Security: Rs 99.24

Futures Price of IRF Contract: Rs 99.28

Loss in underlying market will be $(99.24 - 100.05) * 2000 = \text{Rs } 1620$

Profit in the Futures market will be $(99.28 - 100.12) * 2000 = \text{Rs } 1680$

Certain risks are inherent to Derivative strategies viz. lack of opportunities, inability of Derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of Derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

Portfolio Turnover:

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

Risk Control:

Risk is an inherent part of the investment function. Effective Risk Management is critical to Fund Management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of the Regulations.

The AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools. Further, the AMC has implemented a robust Front Office System (FOS) for managing risk related to investment restrictions. The system has inbuilt feature which enables the Fund Manager calculate various risk ratios and analyze the same.

The AMC has experienced investment professionals to help limit investment universe to carefully selected high quality businesses. The fund manager would also consider hedging the portfolios in case of predictable events with uncertain outcomes.

The Scheme would invest in a diversified portfolio of equity and equity related securities which would help alleviate the credit, sector/market capitalization related concentration risk.

The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

Investments by the AMC in the Scheme

Subject to the Regulations and to the extent permitted by SEBI from time to time, the AMC may invest in the Scheme. However, the AMC will not charge investment management fee on such investment in the Scheme.

Further, in accordance with Regulation 25(16A) of the SEBI (Mutual Funds) Regulations 1996 read with clause 6.9 of SEBI Master Circular, the AMC shall invest such amount in the Scheme, based on the risk associated with the scheme, as may be specified by SEBI from time to time.

The AMC shall also conduct a quarterly review to ensure compliance with the requirement of investment of minimum amount in the Scheme which may change either due to change in value of the AUM or in the risk value assigned to the Scheme. Further, based on review of quarterly average AUM, shortfall in value of the investment in Scheme, if any, shall be made good within 7 days of such review. Such details of investment shall be disclosed on the website of the AMC and AMFI.

G. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Scheme performance would be benchmarked against the Nifty Midcap 150 TRI (First Tier Benchmark)

The Trustee may change the benchmark in future if a benchmark better suited to the investment objective of the Scheme is available.

Justification of Benchmark

Nifty Midcap 150 TRI tracks the performance of companies with relatively mid-size market capitalization. As the Fund intends to primarily invest in such companies, Nifty Midcap 150 TRI is an appropriate benchmark for the Fund.

The Trustee reserves the right to change the benchmark for the evaluation of the performance of the Scheme from time to time, keeping in mind the investment objective of the Scheme and the appropriateness of the benchmark, subject to the Regulations and other prevalent guidelines.

However, if the Mutual Fund is transacting in interest rate swaps through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.
- f. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in Point (a) above.
- g. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

The AMC/RTA will note and record such Pledged Units. A standard form for this purpose is available on request at all ISCs and the Mutual Fund website (www.mahindramanulife.com). The AMC shall mark a lien on the specified units only upon receiving the duly completed form and documents as it may require. Disbursement of such loans will be at the entire discretion of the bank / financial institution / NBFC or any other body concerned and the Mutual Fund assumes no responsibility thereof.</p> <p>The Pledgor will not be able to redeem/switch Units that are pledged until the entity to which the Units are pledged provides a written authorisation to the Mutual Fund that the pledge / lien/ charge may be removed. Right to Limit Redemptions:-

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme when there are circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets such as:

1. Liquidity issues - when market at large becomes illiquid affecting almost all securities rather than any issuer specific security.
2. Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.
3. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems.

Such restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period. However, if exceptional circumstances / systemic crisis referred above continues beyond the expected timelines, the restriction may be extended further subject to the prior approval of Board of Directors of the AMC and Trustee Company giving details of circumstances and justification for seeking such extension shall also be informed to SEBI in advance.

Procedure to be followed while imposing restriction on redemptions

- a. No redemption requests upto INR 2 lacs per request shall be subject to such restriction;
- b. Where redemption requests are above INR 2 lacs:
 - i. The AMC shall redeem the first INR 2 lacs of each redemption request, without such restriction;
 - ii. Remaining part over and above INR 2 lacs shall be subject to such restriction and be dealt as under:
 - Any Units which are not redeemed on a particular Business Day will be carried forward for Redemption to the next Business Day, in order of receipt.
 - Redemptions so carried forward will be priced on the basis of the Applicable NAV (subject to the prevailing Load, if any) of the subsequent Business Day(s) on which redemptions are being processed.
 - Under such circumstances, to the extent multiple redemption requests are received at the same time on a single Business Day, redemptions will

	<p>be made on a prorata basis based on the size of each redemption request, the balance amount being carried forward for redemption to the next Business Day.</p>
<p>Cash Investments in mutual funds</p>	<p>In order to help enhance the reach of mutual fund products amongst small investors, who may not be tax payers and may not have PAN/bank accounts, such as farmers, small traders/businessmen/workers, SEBI has permitted receipt of cash transactions for fresh purchases/ additional purchases to the extent of Rs.50,000/- per investor, per financial year shall be allowed subject to:</p> <ul style="list-style-type: none"> i. compliance with Prevention of Money Laundering Act, 2002 and Rules framed there under; the SEBI Circular(s) on Anti Money Laundering (AML) and other applicable Anti Money Laundering Rules, Regulations and Guidelines; and ii. sufficient systems and procedures in place. <p>However, payment towards redemptions, IDCW, etc. with respect to aforementioned investments shall be paid only through banking channel.</p> <p>The Fund/ AMC is currently in the process of setting up appropriate systems and procedures for the said purpose. Pursuant to clause 10.4.1.a of SEBI Master Circular , no entry load will be charged by the Scheme to the unitholders.</p> <p>Therefore, Sale / Subscription price = Applicable NAV</p>
<p>Ongoing price for redemption (sale) / switch-outs (to other schemes/plans of the Mutual Fund) by investors.</p> <p>(This is the price you will receive for redemptions/switch outs)</p>	<p>At the Applicable NAV subject to prevailing exit load</p> <p>Methodology of calculating the repurchase price</p> <p>Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the “Applicable NAV” to calculate the repurchase price.</p> <p>Therefore, Repurchase / Redemption Price = Applicable NAV *(1 – Exit Load, if any)</p> <p>For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the Unitholder redeems units before completion of 1 year, then the repurchase/redemption price will be:</p> <p>= Rs. 10*(1-0.02) = Rs. 9.80</p>

Calculation of Flex STP

Under the Flex STP – (as per the Frequency) unit holders will be eligible to transfer fixed amount to be transferred per installment **OR** the amount as determined by the following formula, which is higher:

(Number of installments including the current installment x Fixed amount to be transferred per installment) – market value of the investments through Flex STP in the Transferee Scheme on the date of transfer.

In case of Flex STP, if the amount (as specified by the formula) to be transferred under Flex STP is not available in the Transferor Scheme in the unit holder’s account, the residual amount will be transferred to the Transferee Scheme and Flex STP will be terminated.

Illustration 1: How to calculate the transfer amount?

Flex STP Enrollment Details:

Transferor Scheme	Mahindra Manulife “ABC” Fund – Growth option
Transferee Scheme	Mahindra Manulife “XYZ” Fund – Growth Option
Date and Frequency of Flex STP	15 th – Monthly Interval
Amount of Transfer per installment	Rs 5,000/-
Number of Installments	12
Enrollment Period	January – December

Calculation of Flex STP Installment amount on the date of the fourth installment i.e. 15th April:

- Total Units allotted upto the date of last installment i.e. 15th March is assumed as 1,363.636;
- The NAV of Mahindra Manulife XYZ Fund – Growth Option on 15th April is assumed as Rs 10.75 per unit;
- Hence the market value of the investment in the Transferee Scheme on the date of transfer is Rs 14,659.09 [1,363.636 x Rs 10.75]

The installment amount will be calculated as follows:

Fixed Amount specified at the time of enrollment	Rs 5,000/-
OR	
As determined by the formula	(Rs 5,000 x 4) – Rs 14,659.09 = Rs 5,340.91
whichever is higher	

Hence, on 15th April, the installment amount transferred to the Transferee Scheme will be Rs 5,340.91

Illustration 2: How to calculate the transfer amount?

Flex STP Enrollment Details:

Transferor Scheme	Mahindra Manulife “ABC” Fund
Transferee Scheme	Mahindra Manulife “XYZ” Fund – Growth Option
Date and Frequency of Flex STP	15 th – Monthly Interval
Amount of Transfer per installment	Rs 5,000/-
Number of Installments	12
Enrollment Period	January – December

Calculation of Flex STP Installment amount on the date of the fourth installment i.e. 15th April:

- Total Units allotted upto the date of last installment i.e. 15th March is assumed as 1,276.981;
- The NAV of Mahindra Manulife ABC Fund – Growth Option on 15th April is assumed as Rs 12.50 per unit;
- Hence the market value of the investment in the Transferee Scheme on the date of transfer is Rs 15,962.26 [1,276.981 x Rs 12.50]

The installment amount will be calculated as follows:

Fixed Amount specified at the time of enrollment	Rs 5,000/-
OR	
As determined by the formula	(Rs 5,000 x 4) – Rs 15,962.26 = Rs 4,037.74
whichever is higher	

Hence, on 15th April, the installment amount transferred to the Transferee scheme will be Rs 5,000/-

Note: The Flex STP installment dates in the illustrations above are assumed to be Business Days.

The total Flex STP amount invested in the Transferee Scheme shall not exceed the total enrollment amount i.e. amount per installment X number of installments.

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme for each option will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

NAV per unit (Rs.) = (Market / Fair Value of Scheme's Investments + Current Assets including Accrued Income - Current Liabilities and Provisions)
No. of units outstanding under the Scheme / Option on the valuation day

The NAV shall be calculated up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the Income Distribution cum Capital Withdrawal/IDCW Option will be different after the declaration of the first IDCW. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

- **Methodology of calculating the sale price**

The price or NAV a unitholder is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to clause 10.4.1.a of SEBI Master Circular, no entry load will be charged by the Scheme to the unitholders.

Therefore, Sale / Subscription price = Applicable NAV

- **Methodology of calculating the repurchase price**

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price.

Therefore, Repurchase / Redemption Price = Applicable NAV *(1 – Exit Load, if any)

For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the Unitholder redeems units before completion of 1 year, then the repurchase/redemption price will be:

$$\begin{aligned} &= \text{Rs. } 10 * (1 - 0.02) \\ &= \text{Rs. } 9.80 \end{aligned}$$
