I. INTRODUCTION

A. RISK FACTORS

i. Standard Risk Factors:

- 1) Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- 2) The scheme would invest in Equity and Equity related instruments in line with the Investment objective of the scheme. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity schemes unless they afford to take the risk of losing their investment.
- 3) As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down, depending on the various factors and forces affecting the capital markets.
- 4) Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- 5) **Union Midcap Fund** is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- 6) The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of an amount of Rs. 2,00,000 (Rupees Two Lakh) made towards setting up the Mutual Fund.
- 7) Although it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities of value companies and utilising debt and money market instruments as a defensive investment strategy, investors may note that AMC/Fund Manager's investment decisions may not be always profitable.
- 8) **Union Midcap Fund** is not a guaranteed or assured return Scheme.

ii. Scheme Specific Risk Factors:

The Scheme seeks to achieve long term capital appreciation and generate income by investing predominantly in equity and equity related instruments of mid cap companies. While Mid Cap stocks give one an opportunity to go beyond the usual large blue chip stocks and present possible higher capital appreciation, it is important to note that Mid Cap stocks can be riskier and more volatile on a relative basis. The Scheme may also invest in equity and equity related securities of companies other than mid cap companies, debt and money market instruments and in Units issued by REITs and InvITs.

The Scheme related risks include but are not limited to market risk, business risk, derivatives risk, concentration risk, interest rate risk, re-investment risk, basis risk, spread risk, liquidity risk, credit risk/ default risk, counterparty risk, duration risk, settlement risk, performance risk, prepayment risk etc. Further, the securities invested by the scheme may take longer than the time expected by the Fund Manager to appreciate which may adversely affect the return of the scheme.

1. Risks Associated with investments in Equities

The scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both micro and macro factors.

The following are the main risks related to investing in equities:

Market risk: Market Risk is any type of risk due to the market conditions and evolution, such as volatility in the capital markets, changes in macro-economic conditions and factors, interest rates, changes in policies of the Government, taxation laws or any other political and economic development, which all may negatively affect the prices of the securities invested in by the scheme.

Business risk: Risk related to uncertainty of income caused by the nature of a company's business and having an impact on price fluctuations.

Liquidity risk related to equity instruments: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its' quoted or published price/value. Securities that are listed on the stock exchange generally carry lower liquidity risk; the ability to sell these investments is limited by the overall trading volume on the stock exchanges.

Performance Risk: Performance of the Scheme may be impacted with changes in factors which affect the capital market .

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the scheme in case of counterparty default.

Settlement Risk: Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make purchases in intended securities due to settlement problems could cause the Scheme to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Selection Risk: The risk that a security chosen will underperform the market for reasons that cannot be anticipated.

Timing risk: It is the risk of transacting at a price based on erroneous future price predictions resulting to losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

Legislative and fiscal risk: The risk that a change in the tax code or law could affect the value of taxable or tax-exempt interest income.

Concentration risk: This is the risk arising from over exposure to a few securities/issuers/sectors.

2. Risks associated with investing in Fixed Income Securities/Bonds:

The following are the risks associated with investment in Fixed Income Securities/Bonds:

Interest Rate Risk: This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. Fixed income securities such as government bonds, corporate bonds, and money market instruments etc. run price-risk or interest-rate risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices generally increase. The extent of fall or rise in the prices depends upon factors such as coupon, maturity of the security, the yield level at which the security is being traded. The

longer the time to a bond's maturity, the greater is its interest rate risk. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.

Spread Risk: Yield Spreads between fixed income securities might change. Example: Corporate Bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which might adversely affect the NAV of the scheme. Similarly, in case of floating rate securities, where the coupon is expressed in terms of a spread or mark up over the benchmark rate, widening of the spread results in a fall in the value of such securities.

Liquidity Risk: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its true value. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of debt securities may change, depending on market conditions. At the time of selling the security, the security can become less liquid (wider spread) or illiquid, leading to loss in value of the portfolio. Securities that are unlisted generally carry a higher liquidity risk compared to listed securities.

Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring mark to market losses and losses when the security is finally sold.

Liquidity risk is greater for thinly traded securities, lower-rated bonds, bonds that were part of a smaller issue, bonds that have recently had their credit rating downgraded or bonds sold by an infrequent issuer may be relatively illiquid. Bonds are generally the most liquid during the period right after issuance when the bond typically has the highest trading volume.

Credit Risk/ Default Risk: Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and /or principal payment obligations and/or on violation of covenant(s) and/or delay in scheduled payment(s). Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer.

Government Security is a sovereign security and the default risk is considered to be the least. Corporate bonds carry a higher credit risk than Government Securities and among corporate bonds there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"). A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Duration risk: The modified duration of a bond is a measure of its price sensitivity to interest rates movements, based on the average time to maturity of its interest and principal cash flows.

Bond portfolio managers increase average duration when they expect rates to decline, to get the most benefit, and decrease average duration when they expect rates to rise, so minimize the negative impact. If rates move in a direction contrary to their expectations, they lose.

Inflation risk: Inflation causes tomorrow's currency to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices. Inflation-indexed securities such as Treasury Inflation Protection Securities (TIPS) are structured to remove inflation risk.

Performance Risk: Performance of the Scheme may be impacted with changes in factors which affect the capital market and in particular the debt market.

Prepayment Risk: The borrower may repay the receivables earlier than scheduled, which may result in change in the yield and tenor for the Scheme.

Call risk: Some corporate have a "call provision" entitling their issuers to redeem them at a specified price on a date prior to maturity. Declining interest rates may accelerate the redemption of a callable bond, causing an investor's principal to be returned sooner than expected. In that scenario, investors have to reinvest the principal at the lower interest rates. (See also Reinvestment risk.)

Counterparty, settlement, selection, timing, concentration and legislative risk are the same as mentioned under the risks associated with Equities.

3. Risks associated with investing in Derivatives:

Derivatives are financial contracts designed to create pure price exposure to an underlying commodity, asset, rate, index or event. In general, they do not involve the exchange or transfer of principal or title, so investors do not actually buy anything. Rather their purpose is to capture, in the form of value changes, some underlying price change or event.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The Scheme may use permitted derivative instruments like futures, options, interest rate swaps, forward rate agreements and other equity or debt derivative instruments as may be permitted from time to time.

Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to manage the risks.

The risks associated with investments in derivatives are as follows:

Credit Risk: The credit risk is the risk that the counter party will default in its obligations.

Market Risk: Derivatives are traded in the market and are exposed to losses due to change in the prices of the underlying and/or other assets and, change in market conditions and factors. The volatility in prices of the underlying may impact derivative instruments differently than its underlying.

Basis Risk (Equity): This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged. For example, when a stock is hedged using a derivative, the change in price of the stock and the change in price of the derivative may not be fully correlated leading to basis risk in the portfolio.

Basis Risk (Debt): This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Example: Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve or if there is a mismatch in the tenor of the swap and the fixed income security.

Liquidity risk: This risk arises from the inability to sell derivatives at prices that reflect the underlying assets/ rates/ indices, lack of availability of derivatives products across different maturities and with various risk appetite.

Valuation Risk: The risk of mis-pricing or improper valuation of derivatives due to inadequate trading data with good volumes.

Systemic Risk / Operational Risk: The risk arising due to failure of operational processes followed by the exchanges and Over the Counter (OTC) participants for the derivatives trading.

Operational Risk: This is the risk due to failure of operational processes followed by the exchanges and Over the Counter (OTC) participants for the derivatives trading.

Counterparty Risk: Counterparty risk is the risk that losses will be incurred due to the default by the counterparty for OTC derivatives.

Exposure Risk: An exposure to derivatives in excess of the hedging requirements can lead to losses. An exposure to derivatives can also limit the profits from a plain investment transaction.

Interest Rate Risk: This risk arises from the movement of interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

4. Risk Factors Associated with Securities Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

5. Risks associated with investing in Securities Segment and Tri-party Repo trade settlement

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall

is triggered and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund.

6. Risks associated with transaction in Units through stock exchange(s):

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

7. Risk factors associated with investments in REITs and InvITs:

- i) Liquidity Risk:** This refers to the ease with which securities/instruments of REITs / InvITs can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence, there could be times when trading in the units is infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities/instruments for which a liquid market exists. As these products are new to the market they are likely to be exposed to liquidity risk.
- ii) Reinvestment Risk:** Investments in securities/instruments of REITs and InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or IDCW pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.
- iii) Price Risk:** Securities/Instruments of REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices depends upon factors such as general market conditions, factors and forces affecting capital market, real estate and infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures.
- iv) Interest Rate Risk:** Securities/Instruments of REITs and InvITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.
- v) Credit Risk:** Credit risk means that the issuer of a REIT/InvIT security / instrument may default on interest payment or even on paying back the principal amount on maturity. Securities / Instruments of REITs and InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre-scheduled.
- vi) Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his

exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the Applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

However, the AMC shall not charge any Investment Management Fee on its investment in the Scheme. Redemption of substantial portion of such investment by these entities may have an adverse impact on the NAV of the Scheme. This may also affect the ability of the other Unit holders to redeem their units. As the liquidity of the Scheme investments may sometimes be restricted when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or efficient functioning of markets, the time taken by the Fund for Redemption of Units (subject to lock in period, if any) may be significant during such events. In view of this, the AMC has the right, in its sole discretion, on the basis of specific approval of the Board of Directors of the AMC and the Trustee Company, and in accordance with applicable regulations, circulars and other prevalent guidelines, to limit redemptions under certain circumstances. - **Foreign Account Tax Compliance Act (FATCA):**

The Foreign Account Tax Compliance Act (FATCA) is a United States Federal Law, aimed at prevention of tax evasion by US taxpayers through use of offshore accounts. The Government of India and the United States of America (USA) entered into an Inter-Governmental Agreement (IGA) to implement FATCA on August 31, 2015. FATCA is designed to increase compliance by US taxpayers and is intended to bolster efforts to prevent tax evasion by the US taxpayers with offshore investments. Union Mutual Fund is classified as a "Foreign Financial Institution" (FFI) under the FATCA provisions. FATCA requires enhancement of due diligence processes by the FFI so as to enable the FFI to identify US reportable accounts.

In accordance with the FATCA provisions, the Fund /the AMC would be required, from time to time, to undertake necessary due diligence process by collecting information/documentary evidence of the US/non-US status of its investors/ unit holders and identify US reportable accounts, and to disclose/report information (through itself or through its service providers), as far as may be legally permitted, about the holdings/investment returns pertaining to US reportable accounts to the US Internal Revenue Service (IRS) and/or such Indian authorities as may be specified under FATCA or other applicable laws or guidelines; and to carry out such other activities, as prescribed under FATCA or other applicable laws or guidelines, as amended from time to time. The AMC will provide Management and Advisory Services to such Categories of Foreign Portfolio Investors investing in India ('Offshore Funds'), as specified by SEBI, through the Fund Managers managing the schemes of Union Mutual Fund as permitted under Regulation 24(b) of SEBI (Mutual Funds) Regulations, 1996. SEBI has, vide its letter no. IMD/DF3/OW/P/2019/12781/1 dated May 22, 2019, accorded its no objection to the AMC for providing management and advisory services to the Offshore Funds.

The AMC has proper systems and controls in place to ensure that (a) any conflict of interest between the activities of managing the Schemes of Union Mutual Fund and other activities of the AMC will be avoided, (b) there exists a system to prohibit access to insider information of various activities, as envisaged under SEBI (Mutual Funds) Regulations, 1996, and (c) interest of the unit holders of the Schemes of the Fund are protected at all times. In case of an unavoidable conflict of interest situation, the AMC is required to make appropriate disclosures in an appropriate manner, which shall include the source of conflict, potential 'material risk or damage' to investor interests and detailed parameters for the same.

In this context, since the AMC will provide Management and Advisory Services to such Categories of Foreign Portfolio Investors as specified by SEBI, through the Fund Managers managing the schemes of Union Mutual Fund, there could be various conflicts of interest situations that may arise. These conflict of interest situations could lead to potential risks such as the Fund Manager favoring the interest of one Client or a group of Clients to the detriment of the investors under the Mutual Fund and vice versa. To avoid such conflict of interest situations and to ensure fair treatment of investors across various activities undertaken by the AMC, the AMC has identified situations where conflicts may arise and has put in place detailed procedures to address such conflict of interest situations. These situations and procedures are detailed in the Conflicts of Interest Policy of the AMC which is available on the AMC's website viz. www.unionmf.com. The AMC shall ensure that there is no material conflict of interest across different activities undertaken by the AMC.

Further, pursuant to clause 17.2 of SEBI Master Circular for Mutual Funds dated May 19, 2023, in order to bring transparency while addressing the issue of conflict of interest wherein a fund manager is common across the schemes of Union Mutual Fund and Offshore Funds, the AMC shall:

- a) disclose on its website, the returns provided by the said manager for all the schemes (mutual fund, offshore funds etc) on a monthly basis
- b) in case any performance advertisement is issued by the AMC for any scheme, provide the details of returns of all the schemes (mutual fund, offshore funds etc) managed by that fund manager.
- c) in case the difference between the annual returns provided by the schemes managed by the same fund manager is more than 10%, then the same shall be reported to the Trustee and explanation for the same shall be disclosed on the website of the AMC.

The investors are requested to note that the above disclosures shall be further subject to the requirements as prescribed in the SEBI (Mutual Funds) Regulations, 1996 and circulars issued thereunder.

- **Levy of Stamp Duty on applicable mutual fund transactions**

Pursuant to Part I of Chapter IV of the Notification dated February 21, 2019, issued by the Legislative Department, Ministry of Law and Justice, Government of India, on the Finance Act, 2019, read with subsequent notifications including Notification dated March 30, 2020 issued by Department of Revenue, Ministry of Finance, Government of India, a stamp duty at the rate of 0.005% of the transaction value would be levied on applicable mutual fund investment transactions such as purchases (including switch-in, Reinvestment of Income Distribution cum Capital Withdrawal) with effect from July 1, 2020. Accordingly, pursuant to levy of stamp duty, the number of units allotted on purchases, switch-ins, Systematic Investment Plan (SIP) installments, Systematic Transfer Plan (STP) installments, Reinvestment of Income Distribution cum Capital Withdrawal etc. to the unit holders would be reduced to that extent. The stamp duty will be deducted from the net investment amount i.e. gross investment amount less any other deduction like transaction charge. Units will be created only for the balance amount i.e. Net Investment Amount as reduced by the stamp duty. The stamp duty will be computed at the rate of 0.005% on an inclusive method basis.

For instance: If the transaction amount is Rs. 100100 /- and the transaction charge is Rs. 100, the stamp duty will be calculated as follows: $((\text{Transaction Amount} - \text{Transaction Charge})/100.005 \times 0.005) = \text{Rs. } 5$. If the applicable Net Asset Value (NAV) is Rs. 10 per unit, then units allotted will be calculated as follows: $(\text{Transaction Amount} - \text{Transaction Charge} - \text{Stamp Duty}) / \text{Applicable NAV} = 9,999.50$ units.

D. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme will be invested predominantly in a portfolio of equity and equity related securities of Mid Cap companies (Clause 2.7 of SEBI Master Circular dated May 19, 2023, as amended from time to time, defines "Large Cap", "Mid Cap" and "Small Cap"), Debt and Money Market Instruments and securities/ instruments which will include but not be limited to the following:

- **Investment in Equity and Equity linked Instruments:**

Equity related securities include, but are not limited to:

- Equity Warrants and Convertible Instruments.
- Fully convertible debentures, partly convertible debentures, convertible preference shares, unlisted securities, initial public offerings, private placements etc.
- Equity Derivatives.

Futures:

A futures contract is an exchange traded, standardized contract between the buyer and the seller for the purchase and sale of a particular asset at a specific price on a specific future date. The price at which the underlying asset would change hands in the future is agreed upon at the time of entering into the contract. The actual purchase or sale of the underlying asset involving payment of cash and delivery of the instrument does not take place until the contracted date of delivery. A futures contract involves an obligation on both the parties to fulfil the terms of the contract. A futures contract on the stock market index gives its owner the right and obligation to buy or sell the portfolio of stocks characterized by the index. Stock index futures are cash settled; there is no delivery of the underlying stocks.

Options:

An option is a contract which provides the buyer of the option (also called the holder) the right, without the obligation, to buy or sell a specified asset at an agreed price on or upto a particular date. For acquiring this right the buyer has to pay a premium to the seller. The seller of the option (known as writer of the option) on the other hand has the obligation to buy or sell that specified asset at the agreed price. An option contract may be of two kinds, viz., a call option or a put option. An option that provides the buyer the right to buy is a call option whereas an option that provides the buyer the right to sell is a put option. Options can be classified based on the exercising feature. Two main types are: European and American. In a European option, the holder of the option can only exercise his right on the date of expiration. In an American option, he can exercise this right anytime between the purchase date and the expiration date. Pursuant

to clause 12.25 of SEBI Master Circular for Mutual Funds dated May 19, 2023, the Scheme shall not write options or purchase instruments with embedded written options.

- iv. Any other securities / instruments as may be permitted by SEBI from time to time.

The Scheme may participate in securities lending as permitted under the Regulations.

- **Investment in Debt and Money Market Instruments:**

- 1. Certificate of Deposit (CD):**

Certificate of Deposit (CD) is a negotiable money market instrument issued by Scheduled Commercial Banks (SCBs) and select All India Financial Institutions (FIs) that have been permitted by the RBI to raise short term resources. The maturity period of CDs issued by the SCBs is between 7 days to 1 year, whereas, in case of FIs, maturity is 1 year to 3 years from the date of issue. CDs also are issued at a discount to face value and can be traded in secondary market.

- 2. Tri-party Repo in Government Securities:**

Tri-party Repo means a repo contract where a third entity (apart from the borrower and lender), called a Tri-Party Agent, acts as an intermediary between the two parties to the repo to facilitate services like collateral selection, payment and settlement, custody and management during the life of the transaction. The Scheme shall undertake Tri-party Repo transactions in Government Securities.

- 3. Commercial Paper (CP):**

Commercial Paper (CP) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and All India Financial Institutions as an alternative source of short term borrowings. CP is traded in secondary market and can be freely bought and sold before maturity. CP can be issued for maturities between a minimum of 15 days and a maximum up to 1 year from the date of issue.

- 4. Reverse Repo:**

Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds. Presently in India, Central Government Securities, State Government securities and T-Bills are eligible for Reverse Repo.

- 5. Treasury Bill (T-Bill):**

Treasury Bills (T-Bills) are issued by the Government of India or State Governments to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, 182 days and 364 days. T-Bills are issued at a discount and for a fixed period.

- 6. Securities created and issued by the Central and State Governments** as may be permitted by RBI, securities guaranteed by the Central and State Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). State Government Securities (popularly known as State Development Loans or SDLs) are issued by the respective State Government in co-ordination with the RBI.

7. **Non-convertible debentures and bonds**

Non-convertible debentures as well as bonds are securities issued by companies / institutions promoted / owned by the Central or State Governments and statutory bodies which may or may not carry a Central/State Government guarantee, public and private sector banks, all India Financial Institutions and Private Sector Companies. These instruments may be secured or unsecured against the assets of the Company and generally issued to meet the short term and long term fund requirements. The Scheme may also invest in the non-convertible part of convertible debt securities.

8. **Floating rate debt instruments**

Floating rate debt instruments are instruments issued by Central / State Governments, corporates, PSUs, etc. with interest rates that are reset periodically.

9. **Debt derivative instruments:**

Interest Rate Swap: An Interest Rate Swap ("IRS") is a financial contract between two parties exchanging or swapping a stream of interest payments for a 'notional principal' amount on multiple occasions during a specified period. Typically, one party receives a predetermined fixed rate of interest while the other party, receives a floating rate, which is linked to a mutually agreed benchmark with provision for mutually agreed periodic resets. Such contracts generally involve exchange of a "fixed to floating" or "floating to fixed" rate of interest. Accordingly, on each payment date that occurs during the swap period, cash payments based on fixed/ floating and floating rates are made by the parties to one another.

Forward Rate Agreement: A Forward Rate Agreement (FRA) is an agreement to pay or receive the difference between the agreed fixed rate and actual interest rate (reference rate specified in the contract) prevailing at a stipulated future date for a notional loan amount and specified time period. The interest rate is fixed now for a future agreed price wherein only the interest is settled between the counter parts.

Interest Rate Futures: A futures contract is a standardized, legally binding agreement to buy or sell a commodity or a financial instrument in a designated future month at a market determined price (the futures price) by the buyer and seller. The contracts are traded on a futures exchange. An Interest Rate Future is a futures contract with an interest bearing instrument as the underlying asset.

Characteristics of Interest Rate Futures

1. Obligation to buy or sell a bond at a future date
2. Standardized contract
3. Exchange traded
4. Physical settlement
5. Daily mark to market

• **Investment in Short Term Deposits**

Pending deployment of funds as per the investment objective of the Scheme, the funds may be parked in short term deposits of Scheduled Commercial Banks, subject to guidelines and limits specified by SEBI.

- **Investment in units of Mutual Fund schemes**

To avoid duplication of portfolios and to reduce expenses, the Scheme may also invest in debt and liquid schemes managed by the AMC or in the debt and liquid schemes of any other mutual funds (without charging any fees) in conformity with the investment objective of the Scheme and in the terms of the prevailing SEBI (Mutual Funds) Regulations, 1996. Provided the aggregate inter-scheme investment made by all the schemes under the same management or in schemes under management of any other asset management company shall not exceed 5% of the Net Asset Value of the Mutual Fund.

- **Units issued by REITs and InvITs**

The Scheme may invest in units issued by REITs and InvITs within the prescribed limits.

The aforementioned securities may be acquired through initial public offering (IPOs), secondary market, private placement, rights offers, negotiated deals. Further investments in debentures, bonds and other fixed income securities will be in instruments which have been assigned investment grade rating by the Credit Rating Agency.

The Scheme, presently, does not intend to invest in Repos/Reverse Repos transactions in corporate debt securities.

Investment in unrated debt instruments shall be subject to complying with the provisions of the Regulations and within the limit as specified in Schedule VII to the Regulations.

The securities / instruments mentioned above and such other securities the Scheme is permitted to invest in could be listed, unlisted, privately placed, secured, unsecured, rated or unrated and of any maturity subject to investment limits specified elsewhere in this document.

Pursuant to clause 12.12 of SEBI Master Circular for Mutual Funds dated May 19, 2023; the AMC may constitute committee(s) to approve proposals for investments in unrated debt instruments. The AMC Board and the Trustee shall approve the detailed parameters for such investments. However, in case any unrated debt security does not fall under the parameters, the prior approval of Board of AMC and Trustee shall be sought.

For applicable regulatory investment limits, please refer paragraph the section on "What are the Investment Restrictions?".

Details of various derivative strategies/examples of use of derivatives have been provided under the section "Derivatives Strategy".

The Fund Manager reserves the right to invest in such securities as may be permitted from time to time and which are in line with the investment objectives of the Scheme.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme seeks to achieve long term capital appreciation and generate income by investing predominantly in equity and equity related securities of mid cap companies. To achieve the investment objective, the scheme will make investments as per the asset allocation pattern of the Scheme. The Scheme will invest atleast 65% of the total assets in equity and equity related securities of midcap companies, which in the opinion of the Fund Manager offers superior risk reward payoff. To manage the assets of the Scheme, the investment team will follow an active strategy and will predominantly follow a bottom up approach of stock selection. The investment team shall scan the market for opportunities and shall evaluate the individual opportunities on their merits, leading to the bottom-up investment decision. Other aspects like asset allocation and sector allocation shall also be considered. Further, the Fund Manager has the discretion to invest in equity and equity related instruments of companies other than

mid cap companies (i.e. companies which have a market capitalisation of above or below the market capitalisation range of midcap companies), in line with the asset allocation pattern of the Scheme.

The fund manager could use derivatives within the permissible limits for hedging and rebalancing the portfolio or such other purpose as may be permitted under the Regulations from time to time.

Investment in Debt and Money Market Instruments will be as per asset allocation pattern mentioned in this document, subject to the investment limits prescribed under the SEBI (Mutual Funds) Regulations, 1996 and circulars issued thereunder. Investment in debt securities will be guided by credit quality, liquidity, interest rates and their outlook.

The Scheme may also invest in the units of REITs and InvITs for diversification, subject to conditions prescribed by SEBI from time to time.

Trading in Derivatives:

The scheme intends to use derivatives for the purpose of hedging and portfolio balancing or such other purpose as may be permitted under the Regulations from time to time. The same shall be within the permissible limit prescribed by SEBI (Mutual Funds) Regulations, 1996 from time to time.

Derivative transactions that can be undertaken by the Scheme include a wide range of instruments, including, but not limited to

- Futures
- Options
- Swaps
- Any other instrument, as may be regulatorily permitted

Derivatives can be either exchange traded or can be Over The Counter (OTC). Exchange traded derivatives are listed and traded on Stock Exchanges whereas OTC derivative transactions are generally structured between two counterparties.

Derivatives Strategy:

Equity Derivatives Strategy:

Index Futures

Index Futures have been introduced by BSE and NSE and three futures of 1 month, 2 months, and 3 months are presently traded on these exchanges. These futures expire on the last working Thursday of the respective months. The Index futures are cash settled and there is no delivery of the underlying stock. The Profitability of the Index / Stock Future as compared to underlying individual securities / security will inter-alia depend on

- Carrying Cost
- Interest available on surplus funds
- Transaction Costs
- Cost Associated with rolling over of the futures trade, if applicable
- Liquidity in the markets etc.

Strategies that employ index futures and their objectives:

The fund has an existing equity portion invested in a basket of stocks. In case the fund manager has a view that the equity markets are headed downwards, the fund can hedge the exposure to equity either

fully or partially by initiating sell futures positions in the index. A long position can be initiated by the fund by buying futures positions in the index against the available cash and permissible equivalents. The extent to which this can be done is determined by existing guidelines.

Risk associated with this strategy:

1. Lack of opportunities available in the market.
2. Inability of the derivatives to correlate perfectly with underlying indices.
3. Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

Illustration:

An example of typical future trade and associated cost as compared to purchasing the underlying index stocks is illustrated below

If the Nifty (Index) was 5850 at the beginning of a month and the quotes for the three futures were as under:

Month	Bid Price	Offer Price
1	5880	5885
2	5900	5915
3	5910	5930

The Fund can make an actual purchase of the stocks in the Index at the Index level of 5850 or buy one month future at the offer price of 5885 as illustrated above. The cost of employing both the strategies is illustrated below.

Particulars	Index Future	Actual Purchase of Stocks
Index at the beginning of the month	5850	5850
Price of 1 Month Future	5885	
A. Execution Cost: Carry and other Index Future costs ((5885 – 5850)	35	Nil
B. Brokerage Cost: Assumed at 0.20% for Index Future and 0.30% for spot Stocks (0.20% of 5885) (0.30% of 5850)	11.77	17.55
C. Return on Surplus Funds left after paying margin (assumed 10% return on the remaining 90% of the funds left after paying 10% margin) (10%*5850*90%*30days/365)	43.27	Nil
Total Cost (A+B-C)	3.5	17.55

Now if on the date of expiry, the Index closes at 5900, then the strategy of purchasing one-month future would yield a gain of Rs. 46.5 (5900-5850-3.5) while the purchase of the underlying securities would result in a gain of Rs. 32.45 (5900-5850-17.55).

Stock Futures:

Individual stock futures are also available in the Indian Equity Markets. Stock futures trade either at a premium or at discount to the spot prices, the level of premium generally reflects the cost of carry. Stock specific issues may have a bearing on futures as speculators may find futures as a cost-effective way of executing their view on the stock. However, such executions usually increase the premium/discount to the spot significantly, thereby giving rise to arbitrage opportunities for a fund.

Strategies that employ stock specific futures and their objectives:

- (a) **Selling spot and buying future:** In case the fund holds the stock of a company at say Rs. 1000 while in the futures market it trades at a discount to the spot price say at Rs. 980 then the fund may sell the stock and buy the futures. On the date of expiry of the stock future, the fund may reverse the transactions (i.e. Buying at Spot & Selling futures) and earn a risk-free Rs. 20/- (2% absolute) on its holdings. As this can be without any dilution of the view of the fund on the underlying stock the fund can still benefit from any movement of the price in the northward direction, i.e. if on the date of expiry of the futures, if the stock trades at 1100 which would be the price of the futures too, the fund will have a benefit of Rs. 100/- whereby the fund gets the 10% upside movement together with the 2% benefit on the arbitrage, and thus getting a total return of 12%.

Risk associated with this strategy:

- Lack of opportunities available in the market
- Risk of mispricing or improper valuation.
- Inability of the derivatives to correlate perfectly with underlying security
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

- (b) **Buying spot and selling future:** Where the stock of a company is trading in the spot market at Rs. 1000 while the futures trades at Rs. 1020/- in the futures market then fund may buy the stock at spot and sell in the futures market thereby earning Rs. 20. In case of adequacy of cash with the fund, this strategy may be used to enhance returns of the Scheme which was otherwise sitting on cash.

Risk associated with this strategy:

- Lack of opportunities available in the market
- Risk of mispricing or improper valuation
- Inability of the derivatives to correlate perfectly with underlying security
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

- (c) **Buying stock future:** Where the scheme wants to initiate a long position in a stock whose spot price is at say, Rs.1000 and futures is at Rs. 980, then the fund may just buy the futures contract instead of the spot thereby benefiting from a lower cost.

Risk associated with this strategy:

- Lack of opportunities available in the market
- Risk of mispricing or improper valuation
- Inability of the derivatives to correlate perfectly with underlying security
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

Options:

Option contracts are of two types - Call and Put; the former being the right, but not obligation, to purchase a prescribed number of shares at a specified price before or on a specific expiration date and the latter

being the right, but not obligation, to sell a prescribed number of shares at a specified price before or on a specific expiration date. The price at which the shares are contracted to be purchased or sold is called the strike price. Options that can be exercised on or before the expiration date are called American Options, while those that can be exercised only on the expiration date are called European Options. Option contracts are designated by the type of option, name of the underlying, expiry month and the strike price. Thus options can be used to earn less volatile returns, earn the premium or use for hedging purposes etc.

Strategies that use Options and the objectives of such strategies:

(a) Call Option (Buy): The fund buys a call option at the strike price of say Rs.1000 and pays a premium of say Rs. 50, the fund would earn profits if the market price of the stock at the time of expiry of the option is more than Rs. 1050 being the total of the strike price and the premium thereon. If on the date of expiry of the option the stock price is below Rs. 1000, the fund will not exercise the option while it loses the premium of Rs. 50.

Risk associated with this strategy:

- Lack of opportunities available in the market.
- Inability of the derivatives to correlate perfectly with underlying security.
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

(b) Put Option (Buy): The fund buys a Put Option at Rs. 1000 with the underlying security trading at Rs. 1000 by paying a premium of say Rs. 50. If the stock price goes down to Rs. 900, the fund would protect its downside and would only have to bear the premium of Rs. 50 instead of a loss of Rs. 100 whereas if the stock price moves up to say Rs. 1100 the fund may let the Option expire and forego the premium thereby capturing Rs. 100 upside in the underlying security held by the Fund.

Risk associated with this strategy:

- Lack of opportunities available in the market.
- Inability of the derivatives to correlate perfectly with underlying security.
- Execution risk, whereby the rates seen on the screen may not be the rates at which the ultimate execution takes place.

The above option positions can be initiated in both index based options as well as stock specific options.

The AMC retains the right to enter into such derivative transactions as may be permitted by the applicable regulations from time to time.

Debt Derivatives Strategy:

In order to achieve the investment objective, the Scheme may take exposure to debt derivatives in accordance with the SEBI Regulations as amended from time to time. The Scheme may use derivative instruments like interest rate swaps like Overnight Indexed Swaps ("OIS"), forward rate agreements, interest rate futures or such other derivative instruments as may be permitted under the applicable regulations. Further, the Mutual Fund will adhere to the applicable guidelines issued by RBI as amended from time to time, for undertaking transactions in forward rate agreements and interest rate swaps and other derivative products. Derivatives will be used for the purpose of hedging, portfolio balancing, increasing the returns of the Scheme or such other purpose as may be permitted under the Regulations and Guidelines from time to time.

The Fund will be allowed to take exposure in interest rate swaps only on a non-leveraged basis. A swap will be undertaken only if there is an underlying asset in the portfolio. In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD.BC.187/07.01.279/1999- 2000 dated November 1, 1999

and July 7, 1999 respectively issued by RBI permitting participation by Mutual Funds in interest rate swaps and forward rate agreements, the Fund will use derivative instruments for the purpose of hedging and portfolio balancing.

The guidelines issued by RBI from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to by the Mutual Fund.

IRS and FRA do also have inherent credit and settlement risks. However, these risks are substantially reduced as they are limited to the interest streams and not the notional principal amounts.

The circumstances under which such transactions would be entered into would be when, for example using the IRS route it is possible to generate better returns / meet the objective of the Scheme at a lower cost. e.g. if buying a 2 Year MIBOR based instrument and receiving the 2 Year swap rate yields better return than the 2 Year AAA corporate bond, the Scheme would endeavour to do that. Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that it would likely rise in the future.

The following information provides a basic idea as to the nature of the derivative instruments proposed to be used by the Fund and the benefits and risks attached therewith. Please note that the examples have been given for illustration purposes only.

Using Overnight Indexed Swaps

In a rising interest rate scenario, the Scheme may enhance returns for the investor by hedging the risk on its fixed interest paying assets by entering into an OIS contract where the Scheme agrees to pay a fixed interest rate on a specified notional amount, for a predetermined tenor and receives floating interest rate payments on the same notional amount. The fixed returns from the Scheme's assets and the fixed interest payments to be made by the Scheme on account of the OIS transaction offset each other and the Scheme benefits on the floating interest payments that it receives.

The Scheme may enter into an opposite position in case of a falling interest rate scenario, i.e. to hedge the floating rate assets in its portfolio the Scheme enters into an OIS transaction wherein it receives a fixed interest rate on a specified notional amount for a specified time period and pays a floating interest rate on the same notional amount. The floating interest payments that the Scheme receives on its floating rate securities and the floating interest payments that the Scheme has to pay on account of the OIS transaction offset each other and the Scheme benefits on the fixed interest payments that it receives in such a scenario.

Illustration:

Assume that the Scheme has a Rs. 25 crores floating rate investment linked to MIBOR (Mumbai Inter Bank Offered Rate). Hence, the Scheme is currently running an interest rate risk and stands to lose if the interest rate moves down. To hedge this interest rate risk, the Scheme can enter into a 6 month MIBOR swap. Through this swap, the Scheme will receive a fixed predetermined rate (assume 7.75%) and pays the "benchmark rate" (MIBOR), which is fixed by the NSE or any other agency such as Reuters. This swap would effectively lock-in the rate of 7.75% for the next 6 months, eliminating the daily interest rate risk. This transaction is usually routed through an intermediary who runs a book and matches deals between various counterparties. The steps will be as follows:

Assuming the swap is for Rs 25 Crores for March 10, 2021 to September 07, 2021. The Scheme is a fixed rate receiver at 7.75% and the counterparty is a floating rate receiver at the overnight rate on a compounded basis (say NSE MIBOR).

On March 10, 2021 the Scheme and the counterparty will exchange only a contract of having entered into this swap. This documentation would be as per International Swap Dealers Association ("ISDA") norms.

On a daily basis, the benchmark rate MIBOR fixed by NSE will be tracked by them.

On September 07, 2021, they will calculate the following:

- The Scheme - fixed rate receiver is entitled to receive interest on Rs 25 Crores at 7.75% for 181 days i.e. Rs 96.08 lakhs, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
- The counterparty is entitled to receive daily compounded MIBOR for 181 days & pay 7.75% fixed.
- On September 07, 2021, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 96.08 lakhs, the Scheme will pay the difference to the counterparty. If the daily compounded benchmark rate is lower, then the counterparty will pay the Scheme the difference.

The above example illustrates the use of derivatives for hedging and optimizing the investment portfolio. Interest Rate Swaps are agreement between two counterparties and has market risk, credit risk and settlement risk. However, these risks are substantially reduced as the monetary exchange involved is the net interest amount and not the principal amount.

Forward Rate Agreement

A FRA is an agreement to pay or receive the difference between the agreed fixed rate and actual interest prevailing at a stipulated future date. The interest rate is fixed now for a future agreed period wherein only the interest is settled between the counter parties.

Illustration:

Assume that on March 09, 2021, the 30 day commercial paper (CP) rate is 8.50% and the Scheme has an investment in a CP of face value Rs. 50 Crores, which is going to mature on April 08, 2021. If the interest rates are likely to remain stable or decline after April 08, 2021, and if the fund manager, who wants to re-deploy the maturity proceeds for 1 more month does not want to take the risk of interest rates going down, he can then enter into a following Forward Rate Agreement (FRA) say as on March 09, 2021:

He can receive 1 X 2 FRA on March 09, 2021 at 8.50% (an agreement to lend for 1 month in 1 month's time) on the notional amount of Rs. 50 Crores, with a reference rate of 30 day CP benchmark. If the CP benchmark on the settlement date i.e. April 08, 2021 falls to 8.25%, then the Scheme receives the difference $8.50 - 8.25$ i.e. 25 basis points on the notional amount Rs. 50 Crores. As the settlement is done at the beginning of the contract, the net present value of the gain needs to be calculated using the 1 month rate as the discount factor. FRA will allow the fund manager to hedge his portfolio from adverse interest rate movements.

Interest Rate Futures

An Interest Rate Futures (IRF) contract is an agreement to buy or sell a debt instrument at a specified date at a price that is fixed today. Assume that the Scheme holds a GOI security and the fund manager has a view that the yields will go up in the near future leading to decrease in value of the investment and subsequent decrease in Net Asset Value (NAV) of the fund. In this case the fund manager may use Interest Rate Futures to mitigate the risk of decline of Net Asset Value (NAV) of the fund. The illustration given below will demonstrate the use of IRF.

Illustration:

Assume that as on December 13, 2020 the Scheme holds a benchmark 10 year paper trading at Rs. 98.35 at a yield of 8.05% and the January 2021 futures contract on the 10 year notional 7% coupon

bearing Government Paper is trading at Rs. 92.10 at a yield of 8.17%. The fund manager decides to hedge the exposure by taking a short position in the January 2021 IRF contract.

On January 25, 2021 the yield of the benchmark 10 year paper has increased to 8.10% and the price has decreased to Rs. 95.00 and the January 2021 futures contract on the 10 year notional 7% coupon bearing Government Paper is trading at Rs. 91.50 at a yield of 8.25%. The fund manager unwinds the short position by buying the January 2021 futures contract. The transaction results in profit from the futures position, against the corresponding loss from the long Government of India security position.

Certain risks are inherent to Derivative strategies viz. lack of opportunities, inability of Derivatives to correlate perfectly with the underlying and execution risks, whereby the rate seen on the screen may not be the rate at which the transaction is executed. For details of risk factors relating to use of Derivatives, the investors are advised to refer to Scheme Specific Risk Factors given elsewhere in this document.

Investment in Mutual Fund units:

To avoid duplication of portfolios and to reduce expenses, the Scheme may also invest in debt and liquid schemes managed by the AMC or in the debt and liquid schemes of any other mutual funds (without charging any fees) in conformity with the investment objective of the Scheme and in the terms of the prevailing SEBI (Mutual Funds) Regulations, 1996. Provided the aggregate inter-scheme investment made by all the schemes under the same management or in schemes under management of any other asset management company shall not exceed 5% of the Net Asset Value of the Mutual Fund.

Investment Process on the basis of asset allocation is summarized as follows:

While the Scheme is focused on the mid-cap stocks and follows a fundamental bottom up approach to identify growth sectors, it is diversified within its theme, and focused on investing in carefully selected stocks, offering best possible potential growth opportunities. Other aspects like asset allocation, sector allocation etc. shall also be considered.

Investment Process for Equity and Equity related instruments:

- Individual Securities Selection: Research forms a very important part of the portfolio creation process and superior performance comes from superior security selection based on research capabilities. The Research Analysts would look at the following factors while analysing the companies in the investible universe.
 - ✓ Quantitative Factors
 - Financial strength
 - Profit Margin
 - Sales growth
 - Return on Capital Employed
 - Valuation
 - ✓ Qualitative Factors
 - Business of the company and brief history
 - Management and promoters
 - Product profile
 - Customer/market for the products
 - Business risk
 - Corporate governance
 - ✓ Market Factors

- Average daily volume, market capitalization, shareholding pattern/free float etc.
- Portfolio Creation: In creating the portfolio, the fund manager shall look at various factors like the suitability of the security for the portfolio, which shall include the riskiness of the security, the growth prospects, the volume, free float, market capitalization, the sector to which the security belongs etc. before allocating a desired weight to the security.
- Asset Allocation: Based on the macro-economic outlook and the macro-research, the Fund manager shall take a call on the asset allocation in terms of Equities, Equity derivatives and short term Debt/Money market/Cash equivalent within the permissible limits for the fund.
- Sector Allocation: The sector allocation shall be decided based on the macro factors and the attractiveness of the various sectors and also considering the composition of the various sectors within the benchmark.
- Portfolio Performance Review: The investment and the risk team would review the performance of the portfolio and the portfolio composition and accordingly re-balance the portfolio to bring it in line with the desired characteristics.

Investment Process for Debt and Money market instruments:

The Fund Manager shall take a view on the broad direction of the markets including interest rate outlook. The Credit Analyst along with the Fund Manager shall have the responsibility of individual security analysis, while the dealers shall execute the trading mandates with a view to obtaining the best execution in terms of price and quantity.

- The Fund Manager, while buying / selling securities for the Scheme shall take into account the following main factors:
 - ✓ Interest Rate Outlook
 - ✓ Compliance with SEBI Guidelines
 - ✓ Risk Management Guidelines
 - ✓ Yield to Maturity of the instrument
 - ✓ Yield curve analysis
 - ✓ Liquidity of the instrument
 - ✓ Credit Rating
 - ✓ Credit spreads
- Credit Research and Monitoring of Money Market and Debt Instruments:

The investment team will look at each issue in details; the following broad framework shall help the team in managing the funds. Following are the key aspects of the process:

- ✓ Creation and Maintenance of an Investment Universe
- ✓ In-house credit appraisal
- ✓ Tier system of monitoring
- ✓ Exposure Norms

Portfolio Turnover:

The scheme being an open ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Further the trading opportunities could be exploited by the fund manager to optimise returns for the scheme, which could result in increase in portfolio turnover. The Fund manager would also be required to rebalance the portfolio in line with the asset allocation and the investment objectives. The portfolio will be managed taking into account the associated risks perceived/expected so as to minimise risks by using appropriate risk management techniques. All of these could result in increase in portfolio turnover. There may be an increase in transaction cost such

as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which could offset the increase in costs. The Fund Manager will endeavour to optimise portfolio turnover to maximise gains and minimise risks keeping in mind the costs associated with it. However, it is difficult to estimate with reasonable measure of accuracy, the likely turnover in the portfolio of the scheme. The scheme has no specific target relating to portfolio turnover.

RISK CONTROL:

The asset allocation of the Scheme will be steadily monitored and it shall be ensured that investments are made in accordance with the scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

A detailed process has been designed to identify, measure, monitor and manage portfolio risk. The aim is to have a structured mechanism towards risk management thereby maximising potential opportunities and minimising the adverse effects of risk. Effective risk management is crucial for achieving optimum results. Adequate safeguards would be incorporated in the portfolio management process. The main instrument for reducing risk is through diversification across sectors/companies/ securities. The Fund Manager’s job is to identify securities which offer higher returns with a lower level of risk. While identifying such securities, rigorous credit evaluation would be carried out by the investment team. The front office system of the AMC has the capability of pre- investment monitoring of investment restrictions as per SEBI guidelines and various internal limits prescribed from time to time to facilitate pre-emptive monitoring.

Some of the risks and the corresponding risk mitigating strategies are listed below:

Risk	Risk mitigation strategy
<p>Market Risk The scheme is vulnerable to price fluctuations and volatility changes, which could have a material impact on the overall returns of the scheme.</p>	<p>Endeavour to have a diversified portfolio of good companies with the ability to use cash/derivatives for hedging.</p>
<p>Business Risk Risk related to uncertainty of income caused by the nature of a company’s business and having an impact on price fluctuations.</p>	<p>Portfolio companies carefully selected to include those with perceived good quality of earnings.</p>
<p>Derivatives Risk Various inherent risks arising as a consequence of investing in derivatives.</p>	<p>Continuous monitoring of the derivatives positions and strict adherence to the regulations.</p>
<p>Concentration Risk Risk arising due to over exposure to few securities/issuers/sectors</p>	<p>This Scheme may have a concentration risk being a fund predominantly investing in mid cap companies. However, the Scheme shall endeavour to ensure diversification by investing across the spectrum of securities/issuers/sectors.</p>
<p>Liquidity Risk Risk associated with saleability of portfolio securities</p>	<p>Monitor the portfolio liquidity periodically.</p>
<p>Performance Risk Risk arising due to changes in factors affecting markets.</p>	<p>Endeavour to have a diversified portfolio of good companies carefully selected to include those with perceived good quality of earnings.</p>

Provided that such limit shall not be applicable for investments in Government Securities, treasury bills and triparty repo on Government securities or treasury bills.

The above investment limits may be extended by up to 2% of the NAV of the scheme with prior approval of the Board of Trustees and Board of Directors of the AMC, subject to compliance with the overall 12% limit specified above.

The long term rating of issuers shall be considered for the money market instruments. However, if there is no long term rating available for the same issuer, then based on credit rating mapping of Credit Rating Agencies (CRAs) between short term and long term ratings, the most conservative long term rating shall be taken for a given short term rating. Exposure to government money market instruments such as TREPS on G-Sec/ T-bills shall be treated as exposure to government securities.

The investors should indicate the Option/Facility for which Subscription is made by indicating the choice in the appropriate box provided for this purpose in the application form. In case of valid application received without any choice of Option/Facility, the following default Option/Facility will be considered.

Default Option / Facility:

Default Option – Growth Option

Default facility– Reinvestment of Income Distribution cum Capital Withdrawal Option

Various Options:

- **Growth option**

No IDCW will be declared under this option. The income earned under this option will get accumulated as capital accretion and will continue to remain invested in the Scheme and will be reflected in the NAV of the Units held under this option.

- **Income Distribution cum Capital Withdrawal Option (IDCW)**

IDCW will be declared under this Option at the discretion of the Trustee, subject to availability of distributable surplus calculated in accordance with SEBI (MF) Regulations. IDCW, if declared will be paid to those unitholders whose names appear in the register of unitholders on the notified record date. In case of Units under the Income Distribution cum Capital Withdrawal Option held in dematerialised mode, the Depositories (NSDL/CDSL) will give the list of demat account holders and the number of Units held by them in electronic form on the Record date to the AMC/Registrar. The Trustee reserves the right to change the record date from time to time.

When units are sold, and sale price (Net Asset Value) is higher than face value of the unit, a portion of sale price that represents realized gains is credited to an Equalization Reserve Account which can be used to pay IDCW. Investors are requested to note that, under the aforesaid Option, the amounts can be distributed out of investors capital (Equalization Reserve), which is part of sale price that represents realized gains. Whenever distributable surplus will be distributed, a clear segregation between income distribution (appreciation on NAV) and capital distribution (Equalization Reserve) shall be suitably disclosed in the Consolidated Account Statement provided to investors.

It must be noted that the actual declaration of IDCW and the frequency thereof is at the sole discretion of the Trustee. There is no assurance or guarantee to the unitholders as to the rate of IDCW distribution nor that IDCW be declared regularly. The Trustee reserves the right to declare IDCW. Pursuant to payment of IDCW, the NAV of the Income Distribution cum Capital Withdrawal Option will fall to the extent of the IDCW payout and applicable statutory levies, if any.

Facilities under the Income Distribution cum Capital Withdrawal Option:

- **Payout of Income Distribution cum Capital Withdrawal Option**

Under this facility, IDCW declared, if any, will be paid (subject to deduction of dividend distribution tax and statutory levy, if any) to those unitholders, whose names appear in the register of unitholders on the notified record date.

If the IDCW payable under the Payout of Income Distribution cum Capital Withdrawal Option is equal to or less than Rs 500 then the IDCW would be compulsorily reinvested in the existing option of the Scheme.

In case of Units under the Income Distribution cum Capital Withdrawal Option held in dematerialised mode, the IDCW pay-out will be credited to the bank account of the investor, as per the bank account details recorded with the DP.

- **Reinvestment of Income Distribution cum Capital Withdrawal Option**

Under this facility, the IDCW due and payable to the unitholders will be compulsorily and without any further act by the unitholder, reinvested in the respective Income Distribution cum Capital Withdrawal Option at a price based on the prevailing Net Asset Value per unit on the record date (at the applicable ex-IDCW NAV). The amount of IDCW re-invested will be net of tax deducted at source, wherever applicable. On reinvestment of IDCW, the number of units to the credit of the unitholder's account will increase to the extent of the IDCW reinvested divided by the Applicable NAV. There shall, however, be no load on the IDCW so reinvested.

- **Transfer of Income Distribution cum Capital Withdrawal Plan**

Under this facility, the IDCW declared in the Scheme, if any, can be transferred to any other open-ended scheme of the Fund (in existence at the time of declaration of IDCW, as per the features of the respective scheme) at the Applicable NAV based prices. The amount to the extent of the IDCW declared (net of the distribution tax and statutory levy, if any) will be automatically transferred out of this Scheme (source scheme) to the transferee scheme at the Applicable NAV based prices of the transferee scheme on the ex-IDCW date and equivalent units will be allotted. The details, including mode of holding, of unit holders in the transferee scheme will be as per the existing folio in the source scheme. Units in the transferee scheme will be allotted in the same folio.

If the IDCW payable under the Transfer of Income Distribution cum Capital Withdrawal Plan is equal to or less than Rs 500 then the IDCW would be compulsorily reinvested in the existing option of the Scheme.

If an investor opts for Transfer of Income Distribution cum Capital Withdrawal Plan, the investor must meet the minimum balance

	<p>criteria in the target scheme and in the same folio; else the IDCW will be compulsorily re-invested in the source scheme.</p> <p>In case any of the record date falls on a non business day, the record date shall be the immediately following Business Day.</p> <p>All Units will rank pari passu, among Units within the same Option in each respective Plan under the Scheme, as to assets, earnings and the receipt of IDCW distributions, if any, as may be declared by the Trustee.</p> <p>The AMC, in consultation with the Trustee reserves the right to discontinue/ add more options / facilities at a later date subject to complying with the prevailing SEBI guidelines and Regulations.</p>

	<p>Effect of IDCW:</p> <p>The investors should note that the Fund does not assure or guarantee declaration of IDCW under the Income Distribution cum Capital Withdrawal Option. The actual declaration of IDCW, frequency and the rate of IDCW will inter alia, depend on availability of distributable surplus calculated in accordance with SEBI (MF) Regulations and the decisions of the Trustee shall be final in this regard. There is no assurance or guarantee to the unitholders as to the rate of IDCW nor that the IDCW will be paid regularly.</p> <p>Post declaration of IDCW, the NAV of the Units under the Income Distribution cum Capital Withdrawal Option will stand reduced by the amount of IDCW declared and applicable dividend distribution tax/surcharge/cess/any other statutory levy.</p> <p>Even though the asset portfolio will be common at the scheme level, the NAVs of the growth option and Income Distribution cum Capital Withdrawal Option in each respective Plan under the Scheme will be distinctly different after declaration of the first IDCW to the extent of distributed income, applicable tax and statutory levy, if any, and expenses relating to the distribution of the IDCW.</p> <p>All the IDCW declaration and payments shall be in accordance and in compliance with SEBI regulations, as amended from time to time.</p>

The Unitholder would be required to provide a Base Instalment Amount that is intended to be transferred to the Target Scheme. The actual amount of transfer to the Target Scheme will be determined on the basis of the Unhedged Equity Portfolio of Union Balanced Advantage Fund, an Open-ended Dynamic Asset Allocation Fund (hereinafter referred to as "UEUBAF"). Based on the UEUBAF and the corresponding multiplier factor, the actual amount of STP will be derived for the Source Scheme and such amount will be transferred to the Target Scheme. This STP amount will change on a monthly basis depending on the UEUBAF.</p> <p>The Scheme(s) eligible for this facility are as follows:</p>
--	--

Source Schemes: Union Liquid Fund, Union Dynamic Bond Fund, Union Corporate Bond Fund, Union Overnight Fund, Union Medium Duration Fund, Union Money Market Fund, Union Arbitrage Fund, Union Equity Savings Fund and Union Gilt Fund.

Target Schemes: Union Flexi Cap Fund, Union Tax Saver (ELSS) Fund, Union Small Cap Fund, Union Largecap Fund, Union Value Discovery Fund, Union Focused Fund, Union Large & Midcap Fund, Union Midcap Fund, Union Balanced Advantage Fund, Union Hybrid Equity Fund, Union Retirement Fund and Union Multicap Fund.

- d) The UEUBAF as of the month end will be available on the website www.unionmf.com. This data will be uploaded on the website on a monthly basis. The STP transfers for the month will be based on the levels of UEUBAF for the preceding month end.
- e) To derive the amount of transfer from the Source Scheme to the Target Scheme, the Base Amount selected by the investor shall be multiplied with the Multiplier figure given in the table below depending on the UEUBAF level for the preceding month end.

Example 1: If the UEUBAF level for the end of March 2022 is 34% and the Base Amount for STP Intello selected by the investor is Rs. 10,000, then Rs. 4,000 (which is 0.40 multiplied with Rs. 10,000) shall be transferred from the Source Scheme to the Target Scheme on the STP date in April 2022.

Example 1: If the UEUBAF level for the end of March 2022 is 76% and the Base Amount for STP Intello selected by the investor is Rs. 10,000, then Rs. 50,000 (which is 5 multiplied with Rs. 10,000) shall be transferred from the Source Scheme to the Target Scheme on the STP date in April 2022.

UEUBAF Level (Percentage)	Multiplier (of base STP amount)
Less than 35	0.40
Greater than or equal to 35 but less than 40	0.55
Greater than or equal to 40 but less than 45	0.70
Greater than or equal to 45 but less than 50	0.85
Greater than or equal to 50 but less than 55	1.00

	Greater than or equal to 70 but less than 75	4.20
	Greater than or equal to 75 but less than 80	5.00
	<p>f) As stated in the table above, the Multiplier shall be in the range of 0.40 times to 5.00 times. Therefore, in any case, the derived STP instalment amount will not exceed 5.00 times of the base instalment amount.</p> <p>g) The STP Intello Facility is available only for units held / to be held in non - demat Mode in the Source Scheme and the Target Scheme. This facility is not available for units held / to be held in demat mode.</p> <p>h) There is no maximum duration for availing this facility. --	---

Let us assume a Scheme consists of 3 Securities (A, B and C). It has two investors with total of 10,000 units (Investor 1 with 6,000 units, Investor 2 with 4,000 units).

Total Portfolio Value of Rs. 30 Lakhs (Each Security invested Rs. 10 Lakh).

Current NAV: $30,00,000/10,000 = \text{Rs. } 300$ Per Unit.

Suppose Security A is downgraded to below investment grade and consequently the value of the security falls from Rs. 10,00,000 to Rs. 4,00,000 and the AMC decides to segregate the security into a new portfolio, then the Investors will be allotted the same number of units in the segregated portfolio as they hold in the main portfolio. So, Investor 1 will get 6,000 Units and Investor 2 will get 4,000 units in the segregated portfolio.

With Segregation, the Portfolio Value is Rs. 24,00,000 (Now B & C Securities worth Rs. 20 Lakh and Security A has fallen from Rs. 10,00,000 to Rs. 4,00,000).

	Main Portfolio (Security of B & C)	Segregated Portfolio (Security A)
Net Assets	Rs. 20,00,000	Rs. 4,00,000
Number of Units	10,000	10,000
NAV per Unit	Rs. $20,00,000/10,000 = \text{Rs. } 200$	Rs. $4,00,000/10,000 = \text{Rs. } 40$

With respect to Investors:

	Investor 1	Investor 2
Units held in Main portfolio (No. of Units)	6,000	4,000
NAV of Main Portfolio	Rs. 200 per Unit	Rs. 200 per unit
Value of Holding in Main Portfolio (A) (Rs.)	12,00,000	8,00,000
Units Held in Segregated Portfolio	6,000	4,000
NAV of Segregated Portfolio	Rs. 40 Per unit	Rs. 40 Per unit
Value of Holding in Segregated Portfolio (B) (Rs.)	2,40,000	1,60,000
Total Value of Holdings (A) + (B) (Rs.)	14,40,000	9,60,000

In case if it does not segregate (Total Portfolio would be)

Net Assets of the Portfolio Rs. 24,00,000 (Rs. 4,00,000 in Security A and Rs. 10,00,000 in Security B and Rs. 10,00,000 in Security C	No. of Units 10,000	NAV per unit Rs. 24,00,000/ 10,000= Rs. 240
--	---------------------------	---

	Investor 1	Investor 2
Units held in Original portfolio (No. of Units)	6,000	4,000
NAV of Original Portfolio	Rs. 240 Per Unit	Rs. 240 Per Unit
Value of Holding (Rs.)	14,40,000	9,60,000

Value of the Portfolio would be as follows at different stages/
scenarios:

Sr. No.	Stage /Scenario	Portfolio	Value
I	Before Credit Event	Security A	Rs. 10,00,000
		Security B	Rs. 10,00,000
		Security C	Rs. 10,00,000
		Total Portfolio Value (Security A, B & C)	Rs. 30,00,000
II	On Credit Event if Portfolio is not segregated	Security A	Rs. 4,00,000
		Security B	Rs. 10,00,000
		Security C	Rs. 10,00,000
		Total Portfolio Value (Security A, B & C)	Rs. 24,00,000
III	On Credit Event if Portfolio is segregated	Main Portfolio:	
		Security B	Rs. 10,00,000
		Security C	Rs. 10,00,000
		Segregated Portfolio:	
		Security A	Rs. 4,00,000

			Total Portfolio Value (Security A, B & C)	Rs. 24,00,000

D. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit will be computed by dividing the net assets of the Scheme/Plan/Option by the number of units outstanding under the Scheme /Plan/Option on the valuation date.

[#] Pursuant to clause 10.4 of SEBI Master Circular for Mutual Funds dated May 19, 2023, no entry load will be charged for purchase/ additional purchase/switch in/ SIP/ STP transactions accepted by the Fund. 4. Any other measure which the Mutual Fund may consider necessary.

Methodology of calculation of Exit Load and Redemption Amount:

Exit Load: 1% if units are redeemed or switched out on or before completion of 15 days from the date of allotment. Nil thereafter.

Amount invested on Jan 01 2021 and Applicable NAV: Rs. 5000 @ Rs. 10 per unit;

No. of units Allotted on Jan 01 2021: 500

Amount invested on Feb 01 2021 and Applicable NAV: Rs. 11000 @ Rs. 11 per unit

No. of units Allotted on Feb 01 2021: 1000

Units redeemed on Feb 12 2021: 700

Applicable NAV on Feb 12 2021: Rs. 12 per unit

Exit Load Calculation Methodology (on First-in First Out (FIFO) basis) for the 700 units redeemed on Feb 12 2021 is given as follows:

- Exit load on 500 units bought on Jan 01 2021 which has completed more than 15 days on date of redemption viz Feb 12 2021: Nil
- Exit load on the balance 200 units bought on Feb 01 2021 which has not completed 15 days on date of redemption viz Feb 12 2021 is as follows:

Step 1: Applicable NAV * Exit Load applicable in % = Exit Load Amount per unit i.e. Rs. 12 * 1% = Rs. 0.12 per unit;

Step 2: Applicable NAV - Exit Load Amount per unit = Repurchase price per unit; i.e. Rs. 12- Rs. 0.12 = Rs.11.88 per unit.

Calculation of redemption amount:

No. of units redeemed (Total 700 units)	Whether 15 days from date of allotment completed (yes/ no)	Exit Load applicable (in %)	NAV per unit applied after consideration of Exit Load, if any.	Total Exit Load Amount (in Rs.) on units redeemed	Redemption amount after exit load i.e. Units*NAV applied
500 units	Yes	Nil	Rs. 12	Nil	Rs. 6,000
200 units	No	1%	Rs. 11.88	Rs. 24	Rs. 2,376
Total Redemption Amount →					Rs. 8,376

Note: The above illustration is only given to explanation the methodology of calculation of Exit Load and Redemption Amount. The actual redemption amount would depend on the prevailing Exit Load, applicable taxes, if any, and other terms and conditions mentioned in the scheme documents of the Scheme.

D. WAIVER OF LOAD FOR DIRECT APPLICATIONS

Pursuant to clause 10.4 of SEBI Master Circular for Mutual Funds dated May 19, 2023 no entry load will be charged for purchase / additional purchase / switch-in / SIP/ STP transactions accepted by the Fund. Hence, the provision for waiver of load for direct applications is not applicable.
