### Part III – OTHER DETAILS

#### A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit will be computed by dividing the net assets of the Scheme(s)/Plan(s)/Option(s) by the number of units outstanding under the Scheme(s)/Plan(s)/Option(s) on the valuation date.

The Fund will value its investments according to the valuation norms, as per the AMC's valuation policy and as specified in Eighth Schedule of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) per unit under the Scheme/Plan/Option shall be calculated as follows:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets including accrued income} - \text{Current Liabilities and Provisions including accrued expenses}}{\text{No. of Units outstanding under Scheme/Plan/Option}}$$

**The numerical illustration of the above method is provided below:**

Market or Fair Value of Scheme's investments (Rs.) = 11,00,00,000  
 Current Assets (Rs.) = 10,00,000  
 Current Liabilities and Provisions (Rs.) = 5,00,000  
 No. of Units outstanding under the Scheme = 1,00,00,000  
 NAV per unit (Rs.) =  $\frac{11,00,00,000 + 10,00,000 - 5,00,000}{1,00,00,000} = 11.05$ .

1,00,00,000

The above provisions pertaining to 'Calculation of NAV' shall apply in respect of each individual Scheme and/or Plan as the case may be.

The NAV shall be calculated up to two decimal places. However, the AMC reserves the right to declare the NAVs upto additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Option under each Plan. The NAVs of the Growth Option and the Income Distribution cum Capital Withdrawal Option under each Plan will be different after the declaration of the first IDCW.

The AMC will calculate and disclose the first NAV of the Scheme within a period of 5 business days from the date of allotment. Subsequently, the NAVs will be calculated for all the Business Days.

The NAV of the Scheme will be calculated upto 2 decimals.

The Repurchase Price however, will not be lower than 95% of the NAV subject to SEBI Regulations as amended from time to time.

**Methodology of calculation of repurchase price:**

For calculating the repurchase price, the exit load applicable at the time of investment shall be deducted from the applicable NAV of the Scheme.

For example: If the applicable NAV of the Scheme is Rs. 11 and the Exit Load applicable at the time of investment is 1% if redeemed before completion of 1 year from the date of allotment of units and the investor redeems units before completion of 1 year, then repurchase price will be calculated as follows:

**Step 1:** Applicable NAV \* Exit Load at the time of investment in % = Exit Load Amount;

i.e. Rs. 11 \* 1% = Rs. 0.11;

**Step 2:** Applicable NAV - Exit Load Amount = Repurchase price;

i.e. Rs. 11- Rs. 0.11 = Rs.10.89.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities (as applicable), procedure in case of delay in disclosure of NAV etc. refer to SAI.

**B. NEW FUND OFFER (NFO) EXPENSES**

In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at Applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the Applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

### I. Introduction

#### A. Definitions & Abbreviations

Kindly refer [definitions-interpretations.pdf \(unionmf.com\)](#) for definitions/ interpretation. The given scheme specific definitions/abbreviations/terms as may be applicable to the Scheme apply throughout this Document in addition to the definitions/abbreviations/terms mentioned in the Statement of Additional Information unless the context requires otherwise:

#### B. Risk Factors

##### **Scheme Specific Risk Factors:**

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

- As the investors are incurring expenditure at both the Fund of Fund level and the scheme into which the Fund of Fund invests, the returns that they may obtain may be materially impacted or may at times be lower than the returns that investors may obtain by directly investing in such schemes.
- As the Fund of Fund scheme will invest into an underlying scheme, the expense charged being dependent on the structure of the underlying scheme (being different), it may lead to a non- uniform charging of expenses over a period of time.
- In the Fund of Fund (FOF) factsheets and disclosures of portfolio will be limited to providing the particulars of the schemes invested at FOF level, thus investors may not be able to obtain specific details of the investments of the underlying schemes.
- The fund of fund scheme may have different returns/performance than the underlying scheme due to various reasons. The return of the Fund of Fund may be adversely impacted by Total expense ratio, cash drag, timing and pricing difference b/w the subscription/redemption in the Fund of Fund v/s underlying scheme, operational and transactional reasons etc.

- **RISKS ASSOCIATED WITH INVESTING IN UNDERLYING SCHEMES (AS APPLICABLE):**

The scheme specific risk factors of the underlying schemes become applicable where a fund of fund invests. Investors who intend to invest in Fund of Fund are required to and are deemed to have read and understood the risk factors of the underlying scheme in which the Fund of Fund scheme invest in. Copies of the Scheme Information Documents pertaining to the various schemes of Union Mutual Fund, which disclose the relevant risk factors, are available at the Investor/Customer Service Centers or may be accessed at <https://unionmf.com/>

- **Risks associated with investing in Fixed Income Securities/Bonds:**

The following are the risks associated with investment in Fixed Income Securities/Bonds:

**Interest Rate Risk:** This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. Fixed income securities such as government bonds, corporate bonds, and money market instruments etc. run price-risk or interest-rate risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices generally increase. The extent of fall or rise in the prices depends upon factors such as coupon, maturity of the security, the yield level at which the security is being traded. The longer the time to a bond's maturity, the greater is its interest rate risk. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

**Re-investment Risk:** Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

**Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.

**Spread Risk:** Yield Spreads between fixed income securities might change. Example: Corporate Bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which might adversely affect the NAV of the scheme. Similarly, in case of floating rate securities, where the coupon is expressed in terms of a spread or mark up over the benchmark rate, widening of the spread results in a fall in the value of such securities.

**Liquidity Risk:** This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its true value. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of debt securities may change, depending on market conditions. At the time of selling the security, the security can become less liquid (wider spread) or illiquid, leading to loss in value of the portfolio. Securities that are unlisted generally carry a higher liquidity risk compared to listed securities.

Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring mark to market losses and losses when the security is finally sold.

Liquidity risk is greater for thinly traded securities, lower-rated bonds, bonds that were part of a smaller issue, bonds that have recently had their credit rating downgraded or bonds sold by an infrequent issuer may be relatively illiquid. Bonds are generally the most liquid during the period right after issuance when the bond typically has the highest trading volume.

**Credit Risk/ Default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and /or principal payment obligations and/or on violation of covenant(s) and/or delay in scheduled payment(s). Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer.

Government Security is a sovereign security and the default risk is considered to be the least. Corporate bonds carry a higher credit risk than Government Securities and among corporate bonds there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"). A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

**Counterparty Risk:** This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of counterparty default.

**Settlement Risk:** Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make purchases in intended securities due to settlement problems could cause the Scheme to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

**Duration Risk:** The modified duration of a bond is a measure of its price sensitivity to interest rates movements, based on the average time to maturity of its interest and principal cash flows. Bond portfolio managers increase average duration when they expect rates to decline, to get the most benefit, and decrease average duration when they expect rates to rise, to minimize the negative impact. If rates move in a direction contrary to their expectations, they lose.

**Inflation Risk:** Inflation causes tomorrow's currency to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices. Inflation-indexed securities such as Treasury Inflation Protection Securities (TIPS) are structured to remove inflation risk.

**Performance Risk:** Performance of the Scheme may be impacted with changes in factors which affect the capital market and in particular the debt market.

**Selection Risk:** This is the risk that a security chosen will underperform the market for reasons that cannot be anticipated.

**Timing Risk:** It is the risk of transacting at a price based on erroneous future price predictions resulting to losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

**Prepayment Risk:** The borrower may repay the receivables earlier than scheduled, which may result in change in the yield and tenor for the Scheme.

**Call Risk:** Some corporate, municipal and agency bonds have a "call provision" entitling their issuers to redeem them at a specified price on a date prior to maturity. Declining interest rates may accelerate the redemption of a callable bond, causing an investor's principal to be returned sooner than expected. In that scenario, investors have to reinvest the principal at the lower interest rates. (See also Reinvestment risk.)

**Concentration Risk:** This is the risk arising from over exposure to few securities/issuers/sectors.

**Legislative Risk:** This is the risk that a change in the tax code could affect the value of taxable or tax exempt interest income.

- **Risks associated with segregated portfolio:**

The unit holders may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in the segregated portfolio, the AMC shall enable listing of units of segregated portfolio on the recognized stock exchange. The risks associated in regard to the segregated portfolio are as follows:

- The investors holding units of the segregated portfolio may not be able to liquidate their holdings till the time of recovery of money from the issuer.
- The security comprising the segregated portfolio may not realize any value.
- Listing of units of the segregated portfolio on a recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units of the segregated portfolio on the stock exchange.
- The trading price of units on the stock exchange may be significantly lower than the prevailing Net Asset Value (NAV) of the segregated portfolio.

For the detailed provisions in relation to segregated portfolios, investors are requested to refer the Statement of Additional Information (SAI) of Union Mutual Fund.

## C. Risk mitigation strategies

### RISK MITIGATION MEASURES FOR THE SCHEME

#### Risks Associated with Debt & Money Market Instruments

**Credit Risk** - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

**Market Liquidity Risk:** The Investment Manager will select fixed income securities, which have or are expected to have high secondary market liquidity.

**Interest Rates Risk:** As the investments of the Scheme are expected to be of short duration in nature, the risk can be expected to be minimum.

### RISK MITIGATION MEASURES FOR UNDERLYING SCHEMES

Risk	Risk mitigation strategy
Tracking Error	The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible.
Price risk:	The Scheme is passively managed and Fluctuations in Gold prices will not increase the tracking error.
Liquidity Risk	The Scheme has to sell gold only to designated bankers / traders who are authorized to buy gold. Though, there are adequate numbers of players to whom the Scheme can sell gold the Scheme may have to resort to distress sale of gold if there is no or low demand for gold to meet its cash needs of redemption or expenses.
Event risk/Custody Risk:	There is a risk that part or all of the physical gold belonging to the Scheme could be lost, damaged or stolen. In order to ensure safety, the said gold will be stored with custodian in its vaults. Gold held by custodian is also insured. The custodian will insure/cover all such risks.
Liquidity or Marketability Risk:	The Scheme may invest in government securities, corporate bonds and money market instruments as specified in asset allocation & where will scheme invest section. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.
