Investment	The primary objective of the Scheme to provide capital appreciation by investing in Equity & equity related		
Objective	instruments, Arbitrage opportunities, and Debt & money market instruments.		
	There is no assurance that the investment objective of the Scheme will be achieved.		

### Asset Allocation Pattern of the scheme

Under normal circumstances the asset allocation pattern will be:

Instruments	Indicative Allocation (% of Total Assets)	
	Minimum	Maximum
A. Equity & Equity related Instruments, of which	65	90
Hedged – arbitrage opportunities*	25	80
Unhedged – Net long equity positions**	10	40
B. Debt Securities and Money Market Instruments and Government Securities\$	10	35
C. Exchange Traded Commodity Derivatives	0	10
D. Units issued by REITS and InVITs	0	10

\$ including TREPS/ reverse repos, Credit default swaps, equity linked debentures margin money and securitized debt

\* This denotes equity positions by investing in arbitrage opportunities in the equity market. The Fund Manager in the above case can therefore take exposure to equivalent stock/ index futures & create completely covered positions to avail arbitrage between spot & futures market. Thus, the entire position is primarily used to lock arbitrage profit. The margin money requirement for the purposes of derivative exposure may be held in the form of Term Deposit/G-sec/T-bills/Cash/Money Market instruments etc.

It will also include the arbitrage opportunities arising out of corporate actions (e.g. – FPO, delisting, open offers, demergers, mergers etc). This is not an exhaustive list as every corporate action could offer a different and unique opportunity.

Special Situations (including but not limited to Corporate Actions)

The situations that present an investment opportunity like merger of businesses or companies, demergers which may result in separation / spin – off business operation/activity, share repurchases wherein the companies buys-back their own shares from the market, rights-issues, delisting, open-offer, debt restructuring i.e. a company may change its capital structure by means of reducing debt as higher debt can lead to lower profits and cash flows. There could by many other situations/events/corporate actions that may result in share price appreciation. Such situations may include turnarounds, corporate restructuring, asset plays, and regulatory changes and primary market listings etc.

\*\*This denotes only net long equity exposures aimed to gain from potential capital appreciation of these positions. Thus, it is a directional equity exposure which will not be hedged.

In situations when adequate arbitrage opportunities are not available in the derivative / equity markets or on defensive considerations, the asset allocation of the Scheme would be as given below, at the discretion of the fund manager:

Instruments	Indicative Allocation (% of Total Assets)	
	Minimum	Maximum
A. Equity & Equity related Instruments, of which	15	90
Hedged – arbitrage opportunities*	5	80
Unhedged - Net long equity positions**	10	40
B. Debt Securities and Money Market Instruments and Government Securities\$	10	85
C. Exchange Traded Commodity Derivatives	0	10
D. Units issued by REITS and InVITs	0	10

\$ including TREPS/ reverse repos, Credit default swaps, equity linked debentures margin money and securitized debt

\* This denotes equity positions by investing in arbitrage opportunities in the equity market. The Fund Manager in the above case can therefore take exposure to equivalent stock/ index futures & create completely covered

positions to avail arbitrage between spot & futures market. Thus, the entire position is primarily used to lock arbitrage profit. The margin money requirement for the purposes of derivative exposure may be held in the form of Term Deposit/G-sec/T-bills/Cash/Money Market instruments etc.

Defensive circumstances are when the arbitrage opportunities in the market are negligible, or returns are lower than alternative investment opportunities as per the allocation pattern. The allocation under defensive circumstances will be made keeping in view the interest of the Unit holders. Such position will be closely monitored by the Fund Managers and necessary rebalancing will be done at suitable opportunity but not later than 30 days.

\*\*This denotes only net long equity exposures aimed to gain from potential capital appreciation of these positions. Thus, it is a directional equity exposure which will not be hedged.

The Scheme may utilise internal proprietary model to monitor the markets to decide the asset allocation mix in various asset classes. This model may provide broad guidance regarding the relative valuation levels and scope of the asset allocation opportunities in the market. Given the dynamic nature of the market, while the Fund manager may utilise this model as a broad indicator; the Fund manager shall have the final authority to apply his/her own discretion and judgement while determining the allocation percentage, the allocation interval, and the allocation approach as may be appropriate to pursue the investment objective of the fund. The internal proprietary model may use parameters like Adjusted Price to Book Value of Equity market indices (with an overlay of ROE), Ratio of G-Sec Yield to Earning Yield of Equity market indices, VIX and Equity and Debt Momentum while deciding the Asset Allocation levels of the portfolio. This internal proprietary model may go through periodic revision (as and when required), resulting in addition or deletion of parameters and the weightages assigned to them.

### Illustration

- 1. A very high Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV compared to long term average, indicates higher model value, may result in lower equity allocation say between 10-20%.
- 2. Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV closer to long term average, indicates median model value, may result in equity allocation say between 20-30%.
- 3. A very low Ratio of G-Sec Yield/ Earning yield of Index and Adjusted P/BV compared to long term average, indicates lower model value, may result in higher equity allocation say between 30-40%.

Note: These are tentative numbers for illustration purpose only. The final asset allocation % will be decided based on prevailing market conditions, other parameters like VIX, Momentum etc. along with the primary indicators mentioned above.

### Investment Strategy

The scheme will be an actively managed fund. The Scheme shall endeavour to provide capital appreciation and income to the investors using arbitrage opportunities, investment in equity/equity related instruments and debt/money market instruments.

Under its Equity component, the scheme would invest across market cap/sectors/industries providing the benefit of diversification. The aim of the equity component will be to build a portfolio, representing a cross section of companies diversified across major industries, economic sectors and market capitalization that offer an acceptable risk reward balance.

Under its Debt component, the scheme would aim to generate income by investing in debt (including securitised debt), money market instruments. Fixed income allocation will be made based on the evaluation of macroeconomic factors, market dynamics, credit quality, liquidity, interest rates etc.

For Arbitrage the Scheme may seek to generate income through arbitrage opportunities (including dividend arbitrage, buy back / open offer arbitrage, commodity arbitrage etc.) and adopt strategies depending on market conditions and regulatory compliance.

The scheme shall also invest in REITs/InvITs for the purpose of overall portfolio diversification. The Fund Manager will have the final authority to apply their discretion and judgment while determining the actual allocation percentage, the allocation interval, and the allocation approach as may be appropriate to pursue the investment objective of the Scheme.

At WhiteOak Capital AMC, our investment philosophy is to invest in businesses based on stock selection and to avoid focusing on macro events. We believe in investing in good businesses at attractive valuations. These are the two critical pillars of our investment philosophy – business and valuation. A good business is one that is well managed, scalable, and generates superior returns on incremental capital. Valuation is attractive when the current market price is at a substantial discount to intrinsic value.

Key attributes we look for in a Business	Key factors we evaluate			
a) Superior returns on incremental	Industry competitive intensity Sustainable competitive			
capital	advantage			
b) Scalable long-term opportunity	Industry potential versus current size Expanding market share			
	and scope			

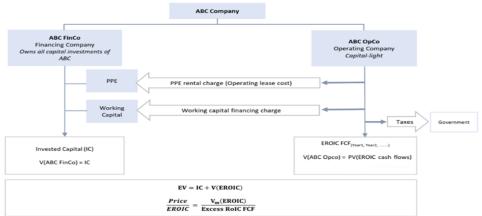

c) Strong execution and governance Drive to create long term value Interests aligned with minority shareholders

### **OpcoFinco Valuation Framework**

We use a proprietary valuation approach that has been trademarked as OpcoFinco. As shown in the extract below, under the OpcoFinco framework, a company is bifurcated into an Opco (capital-light operating company) and Finco (financing company that owns all capital investments). By deducting the invested capital from the publicly available enterprise valuation, we arrive at the value ascribed by the market to the Opco. The OpcoFinco Free Cash Flow (FCF) multiple of the business is then obtained by dividing the value of Opco with the present value of excess FCF generated.

# OpcoFinco Framework

Abbreviations: PPE - Plant Property & Equipment, EROIC - Excess Return on Invested Capital, V(ABC FinCo) - Value of ABC FinCo, V(ABC OpCo) - Value of ABC OpCo, PV - Present Value Excess Return on Invested Capital - Return earned after subtracting the cost of capital.

As the OpcoFinco Framework is based on analysis of cash flows, it avoids several distortions that can potentially emerge while using accounting multiples. Depending on the suitability the traditional valuation approaches might be used for valuation.

The scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rates outlook. The scheme may also have an exposure to derivative instruments for the purpose of hedging, portfolio balancing and optimising returns.

Though every endeavour will be made to achieve the objective of the Scheme, the AMC/ Sponsors/Trustee do not guarantee that the investment objective of the Scheme will be achieved. No guaranteed returns are being offered under the Scheme.

### **Derivatives Strategy**

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

### Use of derivative for other Arbitrage Opportunities

Scheme will employ various strategies to capitalize on price discrepancies across different markets or securities. Some of the arbitrage strategies that may be employed by the fund manager include the following.

• Cash-Future Arbitrage: This strategy involves exploiting pricing differences between cash and futures markets for the same underlying asset. The cash futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock. The Scheme will first buy the stocks in the cash market and then sell in the futures market to lock the spread which will not be affected by the price movement of the cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. There is a convergence between the cash market and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier. However, the position can be closed earlier in case the price differential is realized before expiry or better opportunities are available in other stocks. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of-capital.

For example, let's say the price of XYZ stock in the spot market is Rs 1000, while the price of the same stock in the futures market is Rs 1100. After adjusting for taxes and other costs, the Scheme will buy the stock in the spot market for Rs 1000 and simultaneously sell the same stock in the futures market for Rs 1100, earning the cost of carry between the stock and its futures.

- Rolling over of the Futures Transaction: This strategy involves unwinding the short position in the current month's futures and simultaneously selling futures of the subsequent month, while holding onto the spot position. For example, if the fund manager anticipates a change in market conditions, they may choose to unwind their current month's futures position and roll it over to the subsequent month.
- **Dividend Arbitrage:** For example, prior to a dividend declaration, the stock futures/options market may provide a profitable opportunity. Typically, the stock price declines by the dividend amount when the stock goes ex-dividend. The fund manager may take advantage of this by buying the stock in the spot market and selling the same stock in the futures market.
- Buy-back Arbitrage/open offer strategies: This strategy involves taking advantage of the price differential between the buy-back price and the traded price when a company announces a buy-back of its own shares. For example, if a company announces a buy-back at Rs 100 per share, while the current market price is Rs 95, its futures prices is likely to be higher in anticipation of the buyback price. Here, the fund manager may choose to buy the stock at Rs 95 and sell its futures price at say Rs 100 to capture the high arbitrage opportunity.
- Nifty 50 Spot-Future arbitrage: This strategy involves exploiting the difference in pricing between Nifty spot index (the actual index value) and Nifty futures contracts (derivatives contracts based on the future value of the Nifty index) If the Nifty futures contract is trading at a premium to the spot index, fund manager will sell the futures contract and buy the underlying stocks in the Nifty index to lock in the price differential.

For example, if the Nifty 50 spot index is trading at 22,000 and the Nifty 50 futures contract is trading at 22,050. This scenario indicates that the future contract is trading at premium to the spot index. Fund manager may choose to sell nifty futures contract at 22,050 and buy underlying stocks in Nifty 50 Index to hedge the futures positions.

The above-mentioned arbitrage strategies are only indicative, and the fund manager may adopt other strategies depending on market conditions and regulatory compliance. Additionally, the provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day-to-day basis

For detailed derivative strategies, please refer to SAI.

### Flex SIP Enrolment Details:

Scheme Name	XXXX XXXX Fund
Investment Date & Frequency of flex SIP	15th of every month (T)
Fixed instalment amount	Rs. 5,000/-
Number of instalments	36
Total enrolment amount	Rs. 5000 * 36 = Rs. 1,80,000
Period	January 2022 to December 2024

- Q1. How would the Flex SIP instalment be calculated?
- A1. Calculation of Flex SIP instalment amount for instance on the date of the fourth instalment i.e. April 15, 2022. Total units allotted up to the date of previous instalment i.e. March 15, 2022 is assumed as 685.50. The NAV of the Scheme on April 13, 2022 (T-2) is assumed as Rs. 18/- per unit. Hence the market value of the investment in the Scheme on April 13, 2022 is Rs. 12,339 [685.50 X 18]. The instalment amount will be calculated as follows:

Fixed amount specified at the time of enrolment	:	Rs. 5,000/-			
	or				
As determined by the formula	:	{(5,000 x 4) - 12,339.00}= Rs. 7661.00			
whichever is higher					

Hence, the instalment amount on April 15, 2022 will be Rs. 7,661/-

Q2. How would maximum Flex SIP instalment be calculated?

Calculation of Flex SIP instalment amount for instance on the date of the 7th instalment i.e. July 15, 2022 (T):

Total units allotted up to the date of previous instalment i.e., June 15, 2022 is assumed as 1,558.675. NAV of the Scheme on July 13, 2022 (T-2) is assumed as Rs. 14/- per unit. Hence, the market value of the investment as on July 13, 2022 is Rs. 21,821 [1558.675 X 14].

The instalment amount will be calculated as follows:

Fixed amount specified at the time of enrolment	:	Rs. 5,000/-			
	or				
As determined by the formula	:	{(5,000 x 7) - 21,821.00}= Rs. 13,179.00			
whichever is higher, subject to 2 times the initial installment amount					

Hence, the instalment amount on July 15, 2022 will be Rs. 10,000/-

Q3. How would the Flex SIP instalment be calculated vis-à-vis total enrolment amount?

In the above illustration, the total enrolment amount for Flex SIP is Rs 1,80,000 (5000 X 36 months). If the total amount invested in Flex SIP till the 34th month is Rs 1,77,000, then the 35th installment will be Rs. 3000 (Rs. 1.80.000 - Rs. 1.77.000) and the Flex SIP will cease

- An investor has an option to choose from 5 Flex SIP tenures viz. 3 years, 5 years, 10 years, 15 years and 20 years. If a tenure is not chosen, 5 years shall be the default Flex SIP tenure. The facility offers Monthly Flex Systematic Investment Plan (MFLEX) frequencies.
- The minimum amount per instalment shall be:

MFLEX: Rs. 500/- and in multiples of Rs. 100/- thereafter

- Investors can choose any preferred date of the month as SIP debit date (10th is the default date). Flex SIP shall be processed only through NACH mode.
- Exit Load, if any, prevailing on the date of Flex SIP enrolment shall govern the investments during the tenure.
- In the following circumstances, the Flex SIP facility may cease and SIP may be processed for the fixed instalment amount specified by the unitholder at the time of enrolment:
  - (a) If there is a reversal of any SIP instalment due to insufficient balance or technical reasons; or (b) If there is redemption/ switch-out of any units allotted under Flex SIP. (Units under a Scheme are redeemed on First In First Out (FIFO) basis, irrespective of the mode of allotment).

### Application Supported by Blocked Amount (ASBA)

ASBA provides an alternative mode of payment whereby the application money remains in the investor's account till allotment of units. ASBA process facilitates investors to apply through Self Certified Syndicate Banks (SCSBs), in which the investors have their bank accounts. SCSBs are those banks which satisfy the conditions laid by SEBI. SCSBs would accept the applications, verify the application, block the fund to the extent of investment amount, unblock once the allotment is finalized and debit the investor's account.
