INVESTMENT OBJECTIVE
The objective of the Scheme is to invest in companies whose securities are included in Nifty200 Quality 30 Index, to endeavour to achieve the returns of the above index, subject to tracking errors. This would be done by investing in all the stocks comprising the Nifty200 Quality 30 Index in the same weightage that they represent in Nifty200 Quality 30 Index.

However, there is no assurance or guarantee that the investment objective of the scheme shall be achieved.

ASSET ALLOCATION PATTERN:

Under normal circumstances, the asset allocation of the Scheme would be as follows:

Instruments	Indicative allocations (% of total assets)	
	Minimum	Maximum
Equity and Equity related securities of companies constituting the underlying Index (Nifty200 Quality 30 Index)	95	100
Money Market Instruments including TREPS* and Units of liquid schemes#	0	5

*or similar instruments as may be permitted by RBI/ SEBI, subject to requisite approvals from SEBI / RBI, if needed.

#Excluding subscription money in transit before deployment / payout.

The Cumulative Gross Exposure through Equity, Debt, Derivatives and Money market instruments including TREPS and other permitted securities/assets and such other securities/assets as may be permitted by SEBI, if required, should not exceed 100% of the net assets of the scheme.

The margin may be placed (for transactions such as placement of TREPS, derivatives, Repo etc.) in the form of such securities / instruments / cash may be permitted/eligible to be placed as margin from the assets of the Scheme. The securities / instruments / cash so placed as margin shall be classified under the applicable category of assets for the purposes of asset allocation.

Exposure to various instruments will be as per the indicative table given below: (Below percentages shall be subject to applicable SEBI circulars)

Sr. No.	Type of Instrument	Percentage of exposure	Circular references
1.	Stock Lending	Upto 20% of net assets and single intermediary (broker) limit upto 5% of net assets	Paragraph 12.11 of the Master Circular
2.	Equity Derivatives – on underlying Index (Stock / Index Futures, Stock / Index Options) (for non hedging for rebalancing)*	—	Paragraph 12.25 of the Master Circular
3.	Debt Derivatives (hedge & non hedge exposure) through instruments such as interest rate swaps and forward rate agreements	—	
4.	Securitized Debt	Not Applicable	
5.	Overseas securities		
6.	REITs and InvITs		
7.	AT1 and AT2 bonds		

*The Scheme may take on exposure to equity derivatives of constituents of the underlying Index for short duration when securities of the Index are unavailable, insufficient or for rebalancing at the time of change in Index or in case of corporate actions as permitted subject to rebalancing within 7 calendar days (or as specified by SEBI from time to time).

Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure. AMFI vide letter dated November 3, 2021 has clarified that Cash Equivalent shall consist of Government Securities, T-Bills and Repo on Government Securities.

Any transactions undertaken in the portfolio of the Scheme in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the Index is maintained at all points of time.

Rebalancing of deviation due to short term defensive consideration:

Any alteration in the investment pattern will be for a short term on defensive considerations as per clause 1.14.1.2.b of SEBI Master Circular; the intention being at all times to protect the interests of the Unit Holders and the Scheme shall rebalance the portfolio within 7 calendar days. It may be noted that no prior intimation/indication will be given to investors when the composition/asset allocation pattern under the Scheme undergoes changes within the permitted band as indicated above.

Rebalancing in case of passive breaches:

In line with Clause 3.6.7 of the Master Circular, in case of change in constituents of the index due to periodic review, the portfolio of Scheme shall be rebalanced within 7 calendar days. Further, any transactions undertaken in the portfolio of Index Schemes in order to meet the redemption and subscription obligations shall be done ensuring that post such transactions replication of the portfolio with the Index is maintained at all points of time.

However, at all times the portfolio will adhere to the overall investment objective of the Scheme. However, the same will be rectified at the earliest opportunity as may be available, but not later than 7 calendar days, to minimize the tracking error.

In the event of involuntary corporate action, the scheme shall dispose the security not forming part of the underlying index within 7 calendar days from the date of allotment/listing. Provided further and subject to the above, any change in the asset allocation affecting the investment profile of the Scheme shall be effected only in accordance with the provisions of sub regulation (15A) of Regulation 18 read with sub-regulation (26) of Regulation 25 of the SEBI Regulations. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the Index Fund based on past one year rolling data shall not exceed 2%. The same shall be in accordance with the master circular.

Apart from the above investment restrictions, the Scheme may follow certain internal norms vis-à-vis limiting exposure to scrips, sectors etc., within the above mentioned restrictions, and these are subject to review from time to time.

Negative list: The Scheme will not invest / have exposure in the following:

Sr. No.	Particulars

7.	Additional Tier I bonds and Tier 2 bonds having special features as per paragraph 12.2 of the Master Circular;
8.	Credit Default Swaps transactions; and
9.	REITs and InvITs

INVESTMENT STRATEGY:

The corpus of the Scheme will be invested in stocks constituting the respective benchmark of the Scheme i.e. Nifty200 Quality 30 Index and a very small portion (0-5% of the Net Assets) of the scheme may be kept liquid to meet the liquidity and expense requirements. Further, the Scheme shall follow a passive investment strategy.

The performance of the Scheme may not commensurate with the performance of the respective benchmark of the Scheme on any given day or over any given period. Such variations are commonly referred to as the tracking error. The Scheme intends to maintain a low tracking error by actively managing the portfolio in line with the index.

The stocks comprising the Nifty200 Quality 30 Index is periodically reviewed by NSE Indices. A particular stock may be dropped or new securities may be introduced as constituents of the index. In such an event, the Scheme will endeavor to reallocate its portfolio but the available investment / disinvestment opportunities may not permit precise mirroring of the Index immediately. The portfolio shall be rebalanced within 7 calendar days to ensure adherence to the asset allocation norms of the Scheme. Similarly, in the event of a constituent stock being demerged / merged / delisted from the exchange, the Scheme will replicate the portfolio and seek to minimize the deviation from the index. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the Index Fund based on past one year rolling data shall not exceed 2%. The same shall be in accordance with the master circular.

Further, the Scheme intends to participate in securities lending as permitted under the regulations.

Fixed Income Securities:

The scheme may invest 0-5% of the Net Assets in money market instruments including TREPs to meet the liquidity and redemption requirements, subject to regulatory approvals.

Implementation of Policies:

The Scheme will hold all of the securities that comprise the Underlying Index in the same proportion as the Index. Expectation is that over time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the Index Fund based on past one year rolling data shall not exceed 2%. The same shall be in accordance with the master circular.

The investment manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error (as possible). There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Underlying Index.

Investment Process

The Scheme will track the Underlying Index and is a passively managed scheme. The Investment Decisions will be determined as per the Underlying Index. In case of any change in the index due to corporate actions or change in the constituents of the Underlying Index (as communicated by the Index Service Provider), relevant investment decisions will be determined considering the composition of the Underlying Index.

The investment decision of the Scheme will be carried out by the designated Fund manager.

For detailed derivative strategies and illustrations, please refer to SAI.

RISK PROFILE OF THE SCHEME: Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme Specific Risk Factors summarized below:

For details on risk factors and risk mitigation measures, please refer SID.

Risks associated with investing in companies forming part of Nifty 200 Quality 30 Index

The scheme tracks the performance of 30 stocks from Nifty 200 Index. The 30 stocks are selected from Nifty 200 Index based on their quality score. The quality score for each company is determined based on return on equity (ROE), financial leverage (Debt/Equity Ratio) and earnings (EPS) growth variability analysed during the previous 5 years. The scheme by mandate invests in stocks of the underlying index which represents the Nifty 200 Quality 30 Index having 30 constituents and will therefore be subject to the risks associated with such concentration. The weightage of each stock is capped at the time of rebalancing of index which may help in limiting concentration risk.

Market Risk

The Scheme's NAV will react to the stock market movements. The investor could lose money over short periods due to fluctuation in the Scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices market movements, and over longer periods during market downturns.

Settlement Risk

In certain cases settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio may result, at times, in potential losses to the Scheme, and there can be a subsequent decline in the value of the securities held in the Scheme portfolio.

Passive Investments

The Scheme is not actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

Portfolio Concentration Risk

To the extent that the Scheme may concentrate its investments in the securities of companies of certain sectors/industries, the Scheme will therefore be subject to the risks associated with such concentration. In addition, the Scheme may be exposed to higher levels of volatility and risk than would generally be the case in a more diverse fund portfolio of equity securities. Such risk may impact the Scheme to the extent that it invests in particular sectors even in cases where the investment objective is more generic.

Volatility Risk

The equity markets and derivative markets are volatile and the value of securities, derivative contracts and other instruments correlated with the equity markets may fluctuate dramatically from day to day. This volatility may cause the value of investment in the Scheme to decrease.

Restriction on Redemptions in Mutual Funds: The Trustee, in the general interest of the Unit holders of the Scheme offered in this Document and keeping in view the unforeseen circumstances / unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day.

Tracking error risk

Factors such as the fees and expenses of the Scheme, Corporate Actions, Cash balance, changes to the Underlying Indices and regulatory policies may affect AMC's ability to achieve close correlation with the Underlying Index of each Scheme. The Schemes' returns may therefore deviate from those of its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the index and the NAV of the Scheme. However, the tracking error shall not exceed 2% p.a. and the same shall be in accordance with the master circular.

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error. However, this may vary due to various reasons mentioned below or any other reasons that may arise and particularly when the markets are very volatile.

1. Expenditure incurred by the Scheme.
2. The funds may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or expenses.
3. The underlying index reflects the prices of securities at close of business hours. However, the scheme may buy or sell the securities at different points of time during the trading session at the then prevailing prices which may not correspond to the closing prices.
4. Index Service Provider undertakes the periodical review of the scrips that comprise the underlying index and may either drop or include new securities. In such an event, the scheme will endeavor to reallocate its portfolio but the available investment/ disinvestment opportunities may not permit precise mirroring of the index.
5. The potential for trades to fail which may result in the Scheme not having acquired security at a price necessary to track the index.
6. The holding of a cash/liquid asset position (0-5% of the Net Assets) to meet the redemptions and other liquidity requirements and accrued income prior to distribution and accrued expenses.
7. Any delay experienced in the purchase or sale of shares due to illiquidity of the market, settlement and realization of sale proceeds and the registration of any securities transferred and any delays in receiving cash and scrip dividends and resulting delays in reinvesting them.
8. Corporate actions such as rights, merger, change in constituents etc.
9. Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc.

Risks associated with investing in Equities

- Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities.

- The value of the Schemes' investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Schemes may fluctuate and can go up or down.

- The AMC may not be able to sell securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereto.

- Investors may note that dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the schemes are vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by the scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the schemes may be adversely affected due to such factors.

- While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes in the securities in which it invests.

i. Fund manager endeavors to generate returns based on certain past statistical trend. The performance of the schemes may get affected if there is a change in the said trend. There can be no assurance that such historical trends will continue.

j. The schemes are also vulnerable to movements in the prices of securities invested by the schemes which again could have a material bearing on the overall returns from the schemes. These stocks, at times, may be relatively less liquid as compared to growth stocks.

k. Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Schemes or business prospects of the Company in any particular sector.

Risks associated with Investing in Debt and money market instruments

1) **Market Risk:** The Net Asset Value (NAV) of the Scheme(s), to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

2) Liquidity Risk: The liquidity of a security may change depending on market conditions leading to changes in the liquidity premium linked to the price of the security. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.

3) Credit Risk: Investments in Fixed Income Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

4) **Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.

5) **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

6) **Settlement risk:** The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Schemes' portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses to the Plan, in case of a subsequent decline in the value of securities held in the Schemes' portfolio.

7) **Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.

8) **Risks associated with Investment in unlisted securities:** Except for any security of an associate or group company, the underlying scheme(s) have the power to invest in securities which are not listed on a stock exchange or reserve unlisted securities which in general, are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. These securities may lack a liquid secondary market and there can be no assurance that the underlying scheme(s) will realise their investments in these securities at a fair value.

9) Different types of fixed income securities in which the Scheme(s) would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme(s) risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.

10) The AMC may, considering the overall level of risk of the portfolio, invest in lower rated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.

11) As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.

12) Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.

13) The Scheme(s) at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

14) Scheme's performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.

15) Investment in unrated instruments may involve a risk of default or decline in market value higher than rated instruments due to adverse economic and issuer-specific developments. Such investments display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values for unrated investments tends to be more volatile and such securities tend to be less liquid than rated debt securities.

Risks associated with investing in Tri Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments.

CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall".

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 3 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower.

Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The mechanisms may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

Risks associated with investing in Derivatives

The Scheme may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

The scheme may use derivatives instruments like Stock Index Futures or other derivative instruments for the purpose of portfolio balancing, as permitted under the Regulations and guidelines. Usage of derivatives will expose the Schemes to certain risks inherent to such derivatives.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The specific risk factors arising out of a derivative strategy used by the fund manager may be as below:

- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Execution Risk: The prices which are seen on the screen need not be the same at which execution will take place.
- Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying asset being hedged.
- Exchanges could raise the initial margin, variation margin or other forms of margin on derivative contracts, impose some other margins or maximum margins be placed in cash. All of these might force positions to be unwound at a loss and might materially impact returns.
- The derivative contracts at times are undertaken with various counterparties. These counterparties may not be able to meet the obligations under such derivative contracts. This would lead to credit risk in derivative transactions. Hence, derivative trades are undertaken with approved counterparties or through exchanges. This mitigates credit risk on derivative transactions.

Risks associated with Stock Lending

Stock lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

The risks in stock lending consist of the failure of intermediary / counterparty, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the intermediary / counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell and such securities, which can lead to temporary illiquidity & loss of opportunity.

Investors are requested to refer to section "**How will the Scheme allocate its assets?**" for maximum permissible exposure to Stock Lending.

The AMC shall report to the Trustee on a quarterly basis as to the level of lending in terms of value, volume and the names of the intermediaries and the rating/status arising out of the transactions, the value of collateral security offered etc. The Trustee shall offer their comments on the above aspect in the report filed with SEBI as per the regulations.

Risks associated with investing in securitized debt

The Scheme will not invest in securitized debt.

Risks associated with investing in ADR/ GDR/ Overseas securities

The Scheme will not invest in ADR/GDR/Overseas securities.

Risks associated with Short Selling

The Scheme will not engage in short selling of securities.

Risk Factors associated with creation of segregated portfolios

1. Liquidity risk – A segregated portfolio is created when a credit event occurs at an issuer level in the scheme. This may reduce the liquidity of the security issued by the said issuer, as demand for this security may reduce. This is also further exacerbated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the scheme is to be closed for redemption and subscriptions until the segregated portfolio is created, running the risk of investors being unable to redeem their investments. However, it may be noted that, the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.

Investors may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall list the units of the segregated portfolio on a recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that a deep secondary market will develop for units of segregated portfolio listed on the stock exchange. This could limit the ability of the investors to resell them.

2. Valuation risk - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

Risks Related to Index Schemes

- Performance of the Index will have a direct bearing on the performance of the Scheme. In the event when the Index is dissolved or is withdrawn, the Trustee reserves a right to modify the Scheme so as to track a different and suitable index and appropriate intimation will be sent to the unitholders of the Scheme. In such a case, the investment pattern will be modified suitably to match the composition of the securities that are included in the new index to be tracked and the Scheme will be subject to tracking errors during the intervening period.

- In case of investments in derivative instruments like index futures, the risk / reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares and there is a risk attached to the liquidity and the depth of the index futures market as it is relatively new market for index and also the relatively less depth as compared to the index.

- Currency Risk: Companies within the index may have exposure to foreign currencies through international sales, imports, or foreign exchange contracts. Currency fluctuations can impact the earnings and cash flows of these companies, affecting the overall performance of the scheme.

- Regulatory and Environmental Risk: Companies within the index may be subjected to regulatory requirements related to environmental protection, safety standards, labor practices, and land acquisition. Changes in regulations or compliance issues can affect production costs, supply chains, and profitability, impacting the scheme's performance.

- Technological Disruption: Advances in technology, such as automation, robotics, and renewable energy, can disrupt supply chains, affecting the competitiveness and profitability of the companies held in the index which will have a direct bearing on the performance of the Scheme.

- Corporate Governance Risks: Weak corporate governance practices such as inadequate board oversight, conflicts of interest, or related-party transactions can undermine shareholder value and increase the risk of fraud, mismanagement, or regulatory scrutiny, affecting the scheme's returns.
