Name of the Scheme	TRUSTMF Arbitrage Fund																							
Category of the Scheme	Arbitrage Fund																							
Scheme Type	An open-ended scheme investing in arbitrage opportunities;																							
Scheme Code	TRUS/G/E/ARB/25/07/0013																							
Investment Objective	The investment objective of the scheme is to generate capital appreciation and income by predominantly investing in arbitrage opportunities in the cash and derivatives segment of the equity market, and the arbitrage opportunities available within the derivative segment and by investing the balance in debt and money market instruments. There is no assurance that the investment objective of the scheme will be realized.																							
Asset Allocation Pattern of the Scheme	The below mentioned table provides a broad classification of assets and indicative exposure level in percentage terms for the asset allocation. Under Normal circumstances: <table border="1"> <thead> <tr> <th rowspan="2">Instruments</th><th colspan="2">Indicative allocation (% of total assets)</th></tr> <tr> <th>Minimum</th><th>Maximum</th></tr> </thead> <tbody> <tr> <td>Equity and equity related instruments including equity derivatives</td><td>65</td><td>100</td></tr> <tr> <td>Debt* & Money Market instruments including Units of fixed income mutual fund schemes and margin money deployed in derivative transactions</td><td>0</td><td>35</td></tr> </tbody> </table> Under Defensive circumstances**: <table border="1"> <thead> <tr> <th rowspan="2">Instruments</th><th colspan="2">Indicative allocation (% of total assets)</th></tr> <tr> <th>Minimum</th><th>Maximum</th></tr> </thead> <tbody> <tr> <td>Equity and equity related instruments including equity derivatives</td><td>0</td><td>65</td></tr> <tr> <td>Debt* & Money Market instruments including Units of fixed income mutual fund schemes and margin money deployed in derivative transactions</td><td>35</td><td>100</td></tr> </tbody> </table> * Defensive circumstances are when the arbitrage opportunities in the market are negligible, in view of the fund manager. Equity allocation is measured as the Gross exposure to equities, equity related instruments and derivatives. The exposure to derivative shown in the above asset allocation table is exposure taken against the underlying equity investments i.e. in case the scheme shall have a long position in a security and a corresponding short position in the same security, then the exposure for the purpose of asset allocation will be counted only for the long position. The intent is to avoid double counting of exposure and not to take additional asset allocation with the use of derivative. If suitable arbitrage opportunities are not available in the opinion of the Investment manager, the Scheme may hedge the equity portfolio by using derivatives or may invest in short term debt / money market instruments. *Debt instruments would include (in the form of non-convertible debentures, bonds, zero interest bonds, deep discount bonds, floating rate bond / notes, securitised debt, asset backed securities, mortgage backed securities and any other domestic fixed income securities including structured obligations etc.) include, but are not limited to: • Debt issuances of the Government of India, State and local Governments, Government Agencies and statutory bodies (which may or may not carry a state / central government guarantee), • Debt Instruments that have been guaranteed by Government of India and State Governments, • Debt Instruments issued by Corporate Entities (Public / Private sector undertakings), • Debt Instruments issued by Public / Private sector banks and development financial institutions, • Securitised Debt, Structured Obligations, Credit enhanced Debt. Money market instruments would include Commercial Paper, Commercial Bills, Certificates of Deposit, Treasury Bills, Bills Rediscounting / bill of exchange/ promissory notes, Repot, Reverse Repo, Triparty Repo, Government securities having an unexpired maturity of less than 1 year; alternate to Call or notice money, Usance Bills and any other such short-term instruments as may be allowed under the Regulations (SEBI / RBI) prevailing from time to time. However, justification for the same shall be provided to the Investment Management Committee in writing. The Investment Management Committee shall then decide on the course of action.
Investment Strategy	The Scheme will endeavour to invest predominantly in arbitrage opportunities between spot and futures prices of exchange traded equities and other potential arbitrage opportunities available within the derivative segment and spot segment. In absence of profitable arbitrage opportunities available in the market, the scheme may predominantly invest in short-term debt and money market securities. The fund manager will evaluate the difference between the price of a stock in the futures market and in the spot market. If the price of a stock in the futures market is higher than in the spot market, after adjusting for costs and taxes the scheme shall buy the stock in the spot market and sell the same stock in equal quantity in the futures market, simultaneously. The Fund manager will identify and execute various strategies which seek to exploit arbitrage opportunities in the markets. The Scheme aims to build similar market neutral positions that offer an arbitrage potential. The primary focus of the Scheme will be to capitalize on the price discrepancies across different markets or securities. Some arbitrage strategies which may be employed by fund manager may comprise of the following: Cash-Future Arbitrage - This strategy involves exploiting price differences between cash and future markets for same underlying assets. Cash-Future Strategy can be employed when the price of the future is trading at a premium to the price of its underlying in spot market. The Scheme shall buy the stock in spot market and endeavour to simultaneously sell the future at a premium on a quantity neutral basis to lock the spread which will not be affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the spot market. Thus, there is a convergence between the spot price and the futures market on expiry. This convergence helps the Scheme to generate the arbitrage return locked in earlier.

On or before the date of expiry, if the price differential between the spot and futures position of the subsequent month maturity remains attractive, the scheme may rollover the futures position and hold onto the position in the spot market. In case such an opportunity is not available, the scheme would liquidate the spot position and settle the futures position simultaneously.

Rolling over of the futures transaction means unwinding the short position in the futures of the current month and simultaneously shorting futures of the subsequent month maturity, and holding onto the spot position.

Illustrations

- Buy 100 shares of Company A at Rs 100 and sell the same quantity of stock's future of the Company A at Rs 101.

Market goes up and the stock end at Rs 200.

At the end of the month (expiry day) the future expires automatically:

- Settlement price of future = closing spot price = Rs 200
- Gain on stock is $100 \times (200 - 100) = \text{Rs } 10,000$
- Loss on future is $100 \times (101 - 200) = \text{Rs } -9,900$
- Net gain is $10,000 - 9,900 = \text{Rs } 100$

Market goes down and the stock end at Rs 50.

At the end of the month (expiry day) the future expires automatically:

- Settlement price of future = closing spot price = Rs 200
- Gain on stock is $100 \times (200 - 100) = \text{Rs } 10,000$
- Loss on future is $100 \times (101 - 200) = \text{Rs } -9,900$
- Net gain is $10,000 - 9,900 = \text{Rs } 100$

Unwinding the Position:

- Buy 100 shares of Company A at Rs 100 and sell the same quantity of stock's future of Company A at Rs 101.

The market goes up and at some point, of time during the month (before expiry) the stock trades at Rs 120 and the future trades at Rs 119 then we unwind the position:

- Buy back the future at Rs 119
- Loss incurred is $(101 - 119) \times 100 = \text{Rs } -1,800$
- Sell the stock at Rs 120
- Gain realized: $(120 - 100) \times 100 = \text{Rs } 2,000$
- Net gain is $2,000 - 1,800 = \text{Rs } 200$

Rolling over the Futures:

- The Scheme keeps the stocks position. Close to expiry, if the stock's price is at Rs 150 then the stock's future is close to Rs 150 as well. Also, if the current month stock future is below the next month stock future, we roll over the future position to the next expiry:

Stock future next month is at Rs 151 Stock future current month is at Rs 150

- Then sell future next month at Rs 151 and buy back actual future at Rs 150 gain of $100 \times (151 - 150) = \text{Rs } 100$ and the arbitrage is continuing.

- b) **Index Arbitrage:** The Nifty 50 derives its value from fifty constituent stocks; the constituent stocks (in their respective weights) can be used to create a synthetic index matching the Nifty Index. Also, theoretically, the fair value of a future is equal to the spot price plus the cost of carry.

Theoretically, therefore, the pricing of Nifty Index futures should be equal to the pricing of the synthetic index created by futures on the underlying stocks.

Due to market imperfections, the index futures may not exactly correspond to the synthetic index futures. The Nifty Index futures normally trade at a discount to the synthetic Index due to large volumes of stock hedging being done using the Nifty Index futures giving rise to arbitrage opportunities.

One instance in which an index arbitrage opportunity exists is when Index future is trading at a discount to the index (spot) and the futures of the constituent stocks are trading at a cumulative premium.

The fund manager shall endeavour to capture such arbitrage opportunities by taking long positions in the Nifty Index futures and short positions in the synthetic index (constituent stock futures).

Based on the opportunity, the reverse position can also be initiated.

- c) **Index Arbitrage (Spot Market):** This strategy is very similar to the index arbitrage strategy explained above. This strategy can be executed when the index future is trading at a premium to the underlying index. The Fund Manager will buy the index constituents (ratio of weights in the index) in the spot market and simultaneously sell the index future at a premium. On expiry day, the futures expire at cash. This convergence helps realize the profits locked-in.

	d) Other Arbitrage Strategies: The Scheme will also invest in arbitrage opportunities arising out of corporate actions (e.g. – mergers, FPO, delisting, open offers, etc.). See below for few examples of Corporate Action/ Event Driven Strategies: Dividend Arbitrage: Usually during the period prior to dividend declaration, the stock futures/ options market can provide a profitable opportunity. Typically, the stock price declines by the dividend amount when the stock goes ex-dividend. The fund manager may take advantage of this by buying the stock in the spot market and selling the same stock in the futures market if there is an arbitrage opportunity. Buy-Back Arbitrage: This strategy involves taking advantage of the price differential between the buy-back price and the traded price when a company announces a buyback of its own shares. For example, if a company announces a buy-back at Rs 100 per share, while the current market price is Rs 95, its futures price is likely to be higher in anticipation of the buyback price. Here, the fund manager may choose to buy the stock at Rs 95 and sell its futures price at say Rs 100 to capture the high arbitrage opportunity. Merger: When the Company announces any merger, amalgamation, hive off, de-merger, etc. there could be opportunities due to price differential in the cash and the derivative market. These are just a few examples of arbitrage opportunities arising out of corporate actions. This is not an exhaustive list as every corporate action could offer a different and unique opportunity. The Scheme may deploy one or more of the above-mentioned derivative Strategies to the extent they are in line with the investment objective of the Scheme. These strategies are only indicative, and the fund manager may adopt other strategies depending on market conditions and regulatory compliance. Additionally, the provision for trading in derivatives is an enabling provision and its not binding on the Scheme to undertake trading on day-to-day basis. The Scheme may invest part of its portfolio in debt and money market instruments subject to permissible limits laid down under SEBI (MF) Regulations and will be guided by credit quality, liquidity, interest rate outlook. The Scheme will have an exposure to derivatives for hedging, portfolio balancing and optimising returns. The Debt and Money Market Instruments include any margin money that has to be maintained for the derivative position. The margin money could also be maintained partly as Fixed deposits with Scheduled commercial banks. The maturity profile of the rest of the debt and money market component would be determined by the view of the fund manager. If the view of the fund manager is that interest rates would go up then the average maturity of the debt & money market portfolio would be reduced and if the view of the fund manager is that interest rates would decline, then the average maturity may be increased. This would however depend on the view of the fund manager and can substantially change, depending on the prevailing market circumstances. It's important to note that the above strategies are just examples, and the fund manager may adopt other strategies as well, depending on market conditions and regulatory compliance.
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below: Risk associated with Equity and Equity Related Instruments: Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, general decline in the Indian markets, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAVs of the Units issued under the Scheme may be adversely affected. Risks related to Arbitrage Strategy The primary objective of the Scheme is to identify investment opportunities and to exploit price discrepancies in various markets. Identification and exploitation of the strategies to be pursued by the fund manager involve uncertainty. No assurance can be given that fund manager will be able to locate investment opportunities or to correctly exploit price discrepancies in the capital markets. Reduction in mis-pricing opportunities between the cash market and future and options market may lead to lower level of activity affecting the returns. As the Scheme proposes to execute arbitrage transactions in various markets simultaneously, this may result in high portfolio turnover and consequently high transaction cost.

	In case of a large redemption, the scheme may need to reverse the spot-futures transaction before the date of futures' settlement. This eventuality may lead to the basis risk. While reversing the spot-futures transaction on the Futures & Options settlement day on the Exchange, there could be a risk of volume-weighted-average-price of the market being different from the price at which the actual reversal is processed. This may result in basis risk. On the date of expiry, when the arbitrage is to be unwound, it is not necessary for the stock price and its future contract to coincide. There could be a discrepancy in their prices even a minute before the market closes. Thus, there is a possibility that the arbitrage strategy gets unwound at different prices. • Risks Associated with Investing in Derivatives (Equities and Fixed Income) • Risks Associated with Investing in Debt and/or Money Market Securities • Risks Associated with Securities Lending • Risk Factor Associated with Investing in Tier I and Tier II Bonds • Risks Factors Associated with Investments in Repo Transactions in Corporate Bonds • Risks Associated with Investing in Tri-party Repo Trade Settlement • Risks Associated with Performance of the Scheme • Risks Associated with Segregated Portfolio • Risk Associated with Interest Rate Future (IRFs) • Risks Associated with Investing in REIT and InvIT • Risk Associated with Investment in Securitised Debt Instruments • Risk Associated with Investment in Structured Obligations like Promotor/Corporate Guarantee The Fund, by utilizing a holistic risk management strategy, will endeavour to manage risks associated with investing in markets. The risk control process involves identifying & measuring the risk through various risk measurement tools. For details on risk factors and risk mitigation measures, please refer to the SID.

XI. Prevention of Money Laundering and Know your Customer (KYC)

Further, SEBI has also notified SEBI (KYC Registration Agency) Regulations, 2011 on December 23, 2011 with a view to bring uniformity in KYC requirements for the securities market and to develop a mechanism for centralization of the KYC records. Accordingly the following procedures shall apply:

1. SEBI has introduced a common KYC Application Form for all the SEBI registered intermediaries viz. Mutual Funds, Portfolio Managers, Depository Participants, Stock Brokers, Venture Capital Funds, Collective Investment Schemes, etc. New unit holders are themselves requested to use the common KYC Application Form and carry out the KYC process including KYV with any SEBI registered intermediaries including mutual funds. The KYC Application Form are also available on our website www.trustmf.com.
The Fund shall perform the initial KYC of its new unit holders and may undertake enhanced KYC measures commensurate with the risk profile of its unit holders in line with the aforementioned circulars/notifications issued by SEBI in this regard from time to time. The Fund shall upload the details of the unit holders on the system of the KYC Registration Agency ("KRA"). The Registrar & Transfer Agent of the Fund viz. KFIN Technologies Limited ("KFIN") may also undertake the KYC of the unit holders on behalf of the Fund. On receipt of the KYC documents from the Fund, the KRA shall send a letter to the unit holder within SEBI stipulated timelines, confirming the details thereof.
2. Once the unit holder has done KYC with a SEBI registered intermediary, the unit holder need not undergo the same process again with another intermediary but can submit the letter acknowledgement issued by the KRA.
3. It is mandatory for intermediaries including mutual funds to carry out KYV of its new unit holders. The KYV carried out by any SEBI registered intermediary can be relied upon by the Fund. TAMPL and NSDM/AMFI certified distributors who are Know Your Distributor (KYD)

compliance are authorized to undertake the IPV for initial fund unit holders. Further, in case of any applications received directly (i.e. without being routed through the distributors) from the unit holders, the Fund may rely upon the IPV (as the KYC Application Form) performed by the scheduled commercial banks.

- Existing KYC compliant unit holders of the Fund can continue to invest as per the current practice. However, existing unit holders are also urged to comply with the new KYC requirements including IPV as mandated by SEBI.

Application Form not accompanied by KYC Application Form or letter/acknowledgment issued by KRA may be rejected by the Fund. The KYC compliance status will be validated with the records of the KRA. AMC reserves the right to call for any additional information from the unit holder/applicant/ reject applications/subsequent application in order to fulfil the requirements of PM, Assets prescribed by SEBI/MLA/Regulation from time to time.

Implementation of Central KYC (CKYC)

The Government of India has authorized the Central Registry of Securitization and Asset Reconstruction and Security interest of India (CERSAI, an independent body), to perform the function of Central KYC Records Registry including receiving, storing, safeguarding and retrieving KYC records in digital form.

Accordingly, in line with SEBI circular nos. CRRMISC/06/2015 dated July 21, 2015 and CRRMISC/12/2015 dated November 12, 2015 on Operationalisation of Central KYC (CKYC), read with AMFI Best Practice Guidelines circular no. 86/2015-17 dated December 22, 2015, new individual unit holders investing into the Fund are requested to note the following changes, from February 1, 2017.

Unit holders who have already completed CKYC and have a KYC Identification Number (KN) from the CKYC Registry can invest in schemes of the Fund quoting their 14 digit KN in the application form.
