INVESTMENT STRATEGY : The scheme is an actively managed scheme and seeks to generate long term capital appreciation by investing predominantly in equity & equity related instruments of companies engaged in consumption and consumption related sector or allied sectors.

This scheme offers flexibility in terms of market capitalization and may take focus approach on stocks to tap into a wide range of investment opportunities within the consumer theme, which is influenced by long-term structural shifts in consumption pattern and consumer behaviour. In addition to focusing on the traditional consumer sector, the fund seeks to invest across various industries that benefit from rising consumption trends, increase in digital adoption thereby aiding consumption, increase in discretionary spends, changing demographics & lifestyles, increasing preference for premium/luxury products & services, urbanization, etc. The consumption patterns are fast evolving and present broad-based opportunities. The fund manager will not be restricted by market cap or investment style when identifying stock ideas. Additionally, a portion of the fund may be invested in equity and equity-related securities of companies that are enablers to the consumption sectors and themes.

The indicative list of sectors that the scheme would invest in include (but not limited to):

- FMCG
- Consumer non-durables
- Automobile and Auto Components
- Telecommunication
- Consumer Services
- Media & Entertainment
- Consumer Durables
- Consumer focused E-Commerce & Fintech
- Lending & non-lending Financials
- Textiles
- Pharmaceutical & Healthcare
- Power
- Realty/Hotels
- Hospitality
- Transport
- Airlines
- Trading
- Housing

- E-commerce

Please note that the above list is indicative, and the Fund Manager may add such other sector/industries which satisfy the consumption theme. The fund Manager may also add other sectors as may be added in Nifty India Consumption TRI from time to time.

For determining list of the companies eligible under consumption theme the AMC will consider the basic Industry list published by NSE Indices for NIFTY India Consumption TRI. Please refer link https://www.niftyindices.com/Methodology/Method_NIFTY_Equity_Indices.pdf for current index methodology document published by NSE Indices.

The investment strategy of the Scheme will be reviewed from time to time and might change considering the best interest of the unitholders and if the market conditions warrant it.

Derivatives Strategy:

Trading in Derivatives

The scheme intends to use derivatives for the purpose of hedging and portfolio balancing only or such other purpose as may be permitted under the Regulations from time to time. The same shall be within the permissible limit prescribed by SEBI (Mutual Funds) Regulations from time to time.

Derivative transactions that can be undertaken by the Scheme include a wide range of instruments, including, but not limited to

- Futures
- Options
- Swaps
- Any other instrument, as may be permitted under the regulations.

Derivatives can be either exchange traded or can be Over The Counter (OTC). Exchange traded derivatives are listed and traded on Stock Exchanges whereas OTC derivative transactions are generally structured between two counterparties.

The derivative strategies that the Scheme may use include strategies that employ index futures, strategies that employ index options, strategies that employ stock futures, strategies that employ stock options, and various other derivative strategies. Further, the Scheme may also use Debt derivative strategies which includes Overnight Indexed Swaps, Forward Rate Agreement, Interest Rate Futures, and other Debt derivative strategies.

Portfolio Turnover:

The scheme is an open-ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Further the trading opportunities could be exploited by the fund manager to optimise returns for the scheme, which could result in increase in portfolio turnover. The Fund manager would also be required to rebalance the portfolio in line with the asset allocation and the investment objectives. The portfolio will be managed taking into account the associated risks perceived/expected so as to minimise risks by using appropriate risk management techniques. All of these could result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which could offset the increase in costs. The Fund Manager will endeavour to optimise portfolio turnover to maximise gains and minimise risks keeping in mind the costs associated with it. However, it is difficult to estimate with reasonable measure of accuracy, the likely turnover in the portfolio of the scheme. The scheme has no specific target relating to portfolio turnover.

RISK CONTROL:

The asset allocation of the Scheme will be steadily monitored and it shall be ensured that investments are made in accordance with the scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

A detailed monitoring process has been designed to identify, measure, monitor and manage portfolio risk. The aim is to have a structured mechanism towards risk management thereby maximising potential opportunities and minimising the adverse effects of risk. Effective risk management is crucial for achieving optimum results. Adequate safeguards would be incorporated in the portfolio management process. The main instrument for reducing risk is through diversification across sectors/companies/ securities. The Fund Manager's job is to identify securities which offer higher returns with a lower level of risk. While identifying such securities, rigorous credit evaluation would be carried out by the investment team. The front office system of the AMC has the capability of pre- investment monitoring of investment restrictions as per SEBI guidelines and various internal limits prescribed from time to time to facilitate pre-emptive monitoring. The AMC will be guided by the ratings of Credit Rating Agencies authorised to carry on such activity. Further, various risk management tools will be used for measuring and monitoring portfolio risks

For further details, please refer the SID of the Scheme.

RISK PROFILE OF THE SCHEME : Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.

Scheme specific Risk Factors are summarized below:

As a thematic fund, the scheme is exposed to risks associated with the consumer theme. This focus may lead to higher volatility compared to more broadly diversified equity funds.

Thematic investing is based on the expectation that companies within a particular theme will perform well. However, this narrow focus may limit the fund's ability to diversify into other sectors or themes. As with any equity investment, there is a possibility that companies within the theme may not meet earnings expectations or may be negatively impacted by unforeseen changes in the market or company-specific developments-both of which could affect overall returns.

The scheme is subject to various risks, including but not limited to: market risk, business risk, derivatives risk, concentration risk, interest rate risk, reinvestment risk, basis and spread risk, liquidity risk, credit/default risk, counterparty risk, duration and settlement risk, performance and prepayment risk, as well as risks tied to investments in REITs, InvTs, debt instruments with special features, securities lending, and risks related to Tri-party Repo and segregated portfolios.

Each type of security included in the scheme's portfolio carries its own set of risks, which may cause the overall risk profile of the scheme to vary over time.

The scheme's performance may also be influenced by shifts in government policies, interest rates, and factors affecting trading volumes, liquidity, and settlement systems.

1. Risks Associated with investments in Equities

The Scheme proposes to invest in equity and equity related instruments. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both micro and macro factors.

The following are the main risks related to investing in equities:

Market risk: Market Risk is any type of risk due to the market conditions and evolution, such as volatility in the capital markets, changes in macro-economic conditions and factors, interest rates, changes in policies of the Government, taxation laws or any other political and economic development, which all may negatively affect the prices of the securities invested in by the scheme.

Business risk: Risk related to uncertainty of income caused by the nature of a company's business and having an impact on price fluctuations.

Liquidity risk related to equity instruments: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its quoted or published price/value.

Securities that are listed on the stock exchange generally carry lower liquidity risk; the ability to sell these investments is limited by the overall trading volume on the stock exchanges.

Performance Risk: Performance of the Scheme may be impacted with changes in factors which affect the capital market

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the scheme in case of counterparty default.

Settlement Risk: Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make purchases in intended securities due to settlement problems could cause the Scheme to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Selection Risk: The risk that a security chosen will underperform the market for reasons that cannot be anticipated.

Timing risk: It is the risk of transacting at a price based on erroneous future price predictions resulting to losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

Legislative and fiscal risk: The risk that a change in the tax code or law could affect the value of taxable or tax-exempt interest income.

Concentration risk: This is the risk arising from over exposure to few securities/issuers/sectors.

2. Risks associated with investing in Fixed Income Securities/Bonds:

The following are the risks associated with investment in Fixed Income Securities/Bonds:

Interest Rate Risk: This risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. Fixed income securities such as government bonds, corporate bonds, and money market instruments etc. run price-risk or interest-rate risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices generally increase. The extent of fall or rise in the prices depends upon factors such as coupon, maturity of the security, the yield level at which the security is being traded. The longer the time to a bond's maturity, the greater is its interest rate risk. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Basis Risk: This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for example, when a bond is hedged using a derivative, the change in price of the bond and the change in price of the derivative may not be fully correlated leading to basis risk in the portfolio. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Example: Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve or if there is a mismatch in the tenor of the swap and the fixed income security.

Spread Risk: Yield Spreads between fixed income securities might change. Eg: Corporate Bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which might adversely affect the NAV of the Scheme. Similarly, in case of floating rate securities, where the coupon is expressed in terms of a spread or mark up over the benchmark rate, widening of the spread results in a fall in the value of such securities.

Liquidity Risk: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its true value. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of debt securities may change, depending on market conditions. At the time of selling the security, the security can become less liquid (wider spread) or illiquid, leading to loss in value of the portfolio. Securities that are unlisted also carry a higher liquidity risk compared to listed securities.

Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring mark to market losses and losses when the security is finally sold.

Liquidity risk is greater for thinly traded securities such as lower-rated bonds, bonds that were part of a smaller issue, bonds that have recently had their credit rating downgraded or bonds sold by an infrequent issuer. Bonds are generally the most liquid during the period right after issuance when the typical bond has the highest trading volume.

Credit Risk/ Default Risk: Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations and/or on violation of covenant(s) and/or delay in scheduled payment(s). Even when there is no default, the price of a

security may change with expected changes in the credit rating of the issuer. Government Security is a sovereign security and the default risk is zero. Corporate bonds carry a higher credit risk than Government Securities. Within corporate bonds also there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"). A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of counterparty default.

Settlement Risk: Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make purchases in intended securities due to settlement problems could cause the Scheme to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Duration Risk: The modified duration of a bond is a measure of its price sensitivity to interest rates movements, based on the average time to maturity of its interest and principal cash flows.

Bond portfolio managers increase average duration when they expect rates to decline, to get the most benefit, and decrease average duration when they expect rates to rise, to minimize the negative impact. If rates move in a direction contrary to their expectations, they lose.

Inflation Risk: Inflation causes tomorrow's currency to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices. Inflation-indexed securities such as Treasury Inflation Protection Securities (TIPS) are structured to remove inflation risk.

Performance Risk: Performance of the Scheme may be impacted with changes in factors which affect the capital market and in particular the debt market.

Selection Risk: This is the risk that a security chosen will underperform the market for reasons that cannot be anticipated.

Timing Risk: It is the risk of transacting at a price based on erroneous future price predictions resulting to losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

Prepayment Risk: The borrower may repay the receivables earlier than scheduled, which may result in change in the yield and tenor for the Scheme.

Call Risk: Some corporate, municipal and agency bonds have a "call provision" entitling their issuers to redeem them at a specified price on a date prior to maturity. Declining interest rates may accelerate the redemption of a callable bond, causing an investor's principal to be returned sooner than expected. In that scenario, investors have to reinvest the principal at the lower interest rates. (See also Reinvestment risk.)

Concentration Risk: This is the risk arising from over exposure to few securities/issuers/sectors.

Legislative Risk: This is the risk that a change in the tax code could affect the value of taxable or tax-exempt interest income.

3. Risks associated with investing in Derivatives:

Derivatives are financial contracts designed to create pure price exposure to an underlying commodity, asset, security, rate, index or event. In general, they do not involve the exchange or transfer of principal or title, so investors do not actually buy anything. Rather their purpose is to capture, in the form of value changes, some underlying price change or event.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The Scheme may use permitted derivative instruments like futures, options, interest rate swaps, forward rate agreements or other debt derivative instruments as may be permitted from time to time. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to manage the risks.

The risks associated with investments in derivatives are as follows:

Market Risk: Derivatives are traded in the market and are exposed to losses due to change in the prices of the underlying and/or other assets and, change in market conditions and factors. The volatility in prices of the underlying may impact derivative instruments differently than its underlying.

Basis Risk (Debt): This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for example, when a bond is hedged using a derivative, the change in price of the bond and the change in price of the derivative may not be fully correlated leading to basis risk in the portfolio. The underlying benchmark of a floating rate security might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio. Example: Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve or if there is a mismatch in the tenor of the swap and the fixed income security.

Credit Risk: The Credit Risk is the risk that the counter party will default in its obligations and is generally small as in a derivative transaction there is generally no exchange of the principal amount.

Liquidity Risk: This risk arises from the inability to sell derivatives at prices that reflect the underlying assets/ rates/ indices, lack of availability of derivative products across different maturities and with various risk appetite.

Valuation Risk: This is the risk of mis-pricing or improper valuation of derivatives due to inadequate trading data with good volumes.

Operational / Systemic Risk: This is the risk arising due to failure of operational processes followed by the exchanges and Over the Counter (OTC) participants for the derivatives trading.

Counterparty Risk: Counterparty risk is the risk that losses will be incurred due to the default by the counterparty for OTC derivatives.

Exposure Risk: An exposure to derivatives in excess of the hedging requirements can lead to losses. An exposure to derivatives can also limit the profits from a plain investment transaction.

Interest Rate Risk: This risk arises from the movement of interest rates in adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

4. Risks associated with investing in Securities Segment and Tri-party Repo trade settlement

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall is triggered and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund.

5. Risk factors associated with investments in REITs and InvITs:

i) **Liquidity Risk:** This refers to the ease with which securities/instruments of REITs/InvITs can be sold. There is no assurance that an active secondary market will develop or be maintained. Hence, there could be times when trading in the units is infrequent. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities/instruments for which a liquid market exists. As these products are new to the market they are likely to be exposed to liquidity risk.

Reinvestment Risk: Investments in securities/instruments of REITs and InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

ii) **Price Risk:** Securities/Instruments of REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. The extent of fall or rise in the prices depends upon factors such as general market conditions, factors and forces affecting capital market, real estate and infrastructure sectors, level of interest rates, trading volumes, settlement periods and transfer procedures.

iii) **Interest Rate Risk:** Securities/Instruments of REITs and InvITs run interest rate risk. Generally, when interest rates rise, prices of units fall and when interest rates drop, such prices increase.

iv) **Credit Risk:** Credit risk means that the issuer of a REIT/InvIT security / instrument may default on interest payment or even on paying back the principal amount on maturity. Securities / Instruments of REITs and InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre-scheduled.

v) **Regulatory/Legal Risk:** REITs and InvITs being new asset classes, rights of unit holders such as right to information etc. may differ from existing capital market asset classes under Indian Law.

6. Risk factors associated with instruments having special features:

If the Scheme invests in debt instruments having special features, the following risks associated with debt instruments having special features will be applicable. The risk factors stated below for investment in debt instruments having special features are in addition to the risk factors associated with Fixed Income Securities/Bonds stated above:

i. The Scheme may invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital.

The instrument may also be convertible to equity upon trigger of a pre-specified event for loss absorption. Additional Tier I bonds and Tier 2 bonds issued under Basel III framework are some instruments which may have above referred special features.

The debt instruments having such special features as referred above, would be treated as debt instruments until converted to equity.

ii. The instruments may be subject to features that grant the issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus debt instruments with special features are subject to "Coupon Discretion", "Loss Absorbency", "Write down on Point of Non-Viability (PONV) trigger event" and other events as more particularly described as per the term sheet of the underlying instruments.

iii. The instruments are also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

7. Risk Factors Associated with Securities Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

8. Risks associated with transaction in Units through stock exchange(s):

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

9. Risks associated with segregated portfolio:

If segregated portfolio is created pursuant to clause 4.4 of SEBI Master Circular for Mutual Funds dated June 27, 2024, the following risks associated with segregated portfolio will be applicable: The unit holders may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in the segregated portfolio, the AMC shall enable listing of units of segregated portfolio on the recognized stock exchange. The risks associated in regard to the segregated portfolio are as follows:

- The investors holding units of the segregated portfolio may not be able to liquidate their holdings till the time of recovery of money from the issuer.
- The security comprising the segregated portfolio may not realize any value.
- Listing of units of the segregated portfolio on a recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units of the segregated portfolio on the stock exchange.
- The trading price of units on the stock exchange may be significantly lower than the prevailing Net Asset Value (NAV) of the segregated portfolio.

For details on risk factors and risk mitigation measures, please refer SID.

2) KYC COMPLIANCE WITH ANTI MONEY LAUNDERING (AML) REGULATIONS

In accordance with requirements under the Prevention of Money Laundering Act, 2002, (PMLA) the Rules issued there under and the guidelines and circulars on Anti-Money Laundering issued by SEBI, (collectively "AML Regulations"), mutual funds are required to formulate and implement Client Identification Programme to verify and maintain the record of identity and address(es) of investors. This is commonly referred to as 'Know Your Client' guidelines (KYC).

With a view to streamline implementation of KYC procedures and ensure compliance with the AML Regulations, the mutual fund industry had collectively put in place arrangement with an independent agency (CDSL Ventures Limited) that acted as central record keeping agency ('Central Agency'), and as Central Agency had the responsibility for collection of documents relating to identity and address of investors.

In order to avoid duplication of KYC process with every SEBI registered intermediary and with a view to bringing about uniformity in the KYC requirement and a mechanism for centralization of the KYC records in the securities market, SEBI has vide its various circulars and the SEBI (KYC Registration Agency) Regulations 2011, introduced common KYC across market intermediaries.

With effect from January 01, 2012 ("Effective Date"), SEBI has introduced a common KYC Application Form for all the SEBI registered intermediaries viz. Mutual Funds, Portfolio Managers, Depository Participants, Stock Brokers, Venture Capital Funds, Collective Investment Schemes, etc.

Following are the KYC requirements for new / prospective investors and existing investors:

i. KYC requirements for new / prospective investors:

New/ Prospective Investors are requested to use the common KYC Application Form and carry out the KYC process including In-Person Verification (IPV) with any SEBI registered intermediaries including mutual funds. The KYC Application Forms are available on the website www.unionmf.com.

The Mutual Fund shall perform the initial KYC of its new investors and may also undertake enhanced KYC measures commensurate with the risk profile of its investors in line with the aforesaid circulars / Prevention of Money Laundering Act, 2002, and circulars thereto. The Mutual Fund shall

upload the details of the investors on the system of the KYC Registration Agency (KRA). Registrar & Transfer Agent (RTA) of the Mutual Fund may also undertake the KYC of the investors on behalf of the Mutual Fund. On receipt of initial/updated KYC documents from the Mutual Fund, the KRA shall send a letter to the investor within SEBI prescribed timelines, confirming the details thereof.

It is mandatory for intermediaries including mutual funds to carry out In-Person Verification (IPV) of its new investors from the Effective Date. The IPV carried out by any SEBI registered intermediary can be relied upon by the Mutual Fund. The AMC and National Institute of Securities Markets (NISM)/Association of Mutual Funds in India (AMFI) certified distributors who are Know Your Distributor (KYD) compliant are authorised to undertake the IPV for Mutual Fund investors. Further, in case of any applications received directly (i.e. without being routed through the distributors) from the investors, the Mutual Fund may rely upon the IPV (on the KYC Application Form) performed by the scheduled commercial banks.

Further, the Government of India has authorized the Central Registry of Securitization and Asset Reconstruction and Security interest of India (CERSAI), to act as, and to perform the functions of, the Central KYC (CKYC) Records Registry under the PML Rules 2005, including receiving, storing, safeguarding and retrieving the KYC records in digital form of a client, as defined in the Prevention of Money Laundering Act, 2002. Every reporting entity is required to capture the KYC information for sharing with the Central KYC Records Registry (CKYCR). Accordingly, the investors shall be required to provide requisite KYC information/ documents as prescribed by CERSAI and the AMC from time to time. Investors who have already completed CKYC and have a KYC Identification Number (KIN) can invest in the Mutual Fund by quoting the KIN and by submitting a self certified copy of PAN and by completing In-Person Verification (IPV) as mentioned above

ii. KYC requirements for existing investors:

Existing KYC compliant investors of the Mutual Fund can continue to invest as per the current practice. However, pursuant to SEBI circular no. MIRSD/ Cir-5 /2012 dated April 13, 2012 and subsequent SEBI communication, investors who had completed the erstwhile Centralised Mutual Fund KYC through CDSL Ventures Limited, are required to provide KYC details and complete IPV as per the new KYC requirements, which was not mandated earlier.

It is mandatory for all categories of investors to be KYC compliant for any amount of investment.

AMC reserves the right to reject application forms for transactions in units of the Mutual Fund not accompanied by common KYC Application Form or letter/ acknowledgement issued by the KRA/KIN issued by CERSAI. The KYC compliance status of the investors will be validated with the records of the KRA/CERSAI. For units held in demat form the KYC performed by the Depository Participant of the applicants will be considered as KYC verification done by the Trustee/AMC. In relation to implementation of the SEBI Guidelines on identification of Beneficial Ownership, the AMC reserves the right to call for such information / documents from the investors that the AMC deems fit.

For further details, please refer to the Section on "Prevention of Money Laundering and Know Your Client ("KYC") requirements" in the Statement of Additional Information (SAI).
