Investment strategy	The SBI Quality Fund is an open-ended equity scheme designed to invest in companies identified based on a comprehensive Quality factor approach. This strategy leverages both quantitative financial metrics and qualitative assessments to select high-quality companies known for financial stability, efficient operations, and exemplary management practices. By employing an active investment strategy, the fund aims to deliver risk-adjusted returns while providing investors with a portfolio of resilient, growth-oriented companies. **Key Quality Parameters** The fund's approach to identifying quality companies includes a range of indicative parameters, some of which are outlined below. These parameters serve as guidelines and may vary based on the prevailing market conditions and opportunities: • **Return on Equity (ROE):** Measures the profitability of a company relative to its shareholders' equity, indicating effective capital utilization.

	▪ **Return on Invested Capital (ROIC):** Evaluates how efficiently a company uses its capital to generate profits, indicating effective resource allocation. ▪ **Debt-to-Equity Ratio:** Analyzes financial leverage to understand the company's risk profile, with a lower ratio indicating stability. ▪ **Management Quality:** A qualitative assessment of leadership credibility, strategic vision, governance standards and management's track record in navigating complex business environments. ▪ **Earnings Stability:** Evaluates consistency in earnings over time, indicating a stable income generation model that is less vulnerable to market fluctuations. ▪ **Industry Position and Market Share:** Evaluates a company's competitive positioning within its sector, looking at market share, brand strength, and ability to sustain competitive advantages. ▪ **Capital Allocation Discipline:** Examines management's approach to reinvestment and capital deployment, favoring companies that invest prudently in growth while maintaining healthy balance sheets. The SBI Quality Fund adopts a flexible approach to assessing quality. While the list of parameters listed above is not exhaustive, it is indicative of the broader quality characteristics the fund seeks in companies. This adaptable framework allows the fund to identify companies that are well-positioned for sustainable, quality-driven growth over the long term. The scheme will predominantly be actively managed to achieve its investment objective. Derivatives Strategy: The Scheme may take exposure to derivatives for hedging and/or non-hedging purpose as permitted by regulations from time to time. Such exposure to derivative instruments will be in line with the investment objective and overall strategy of the scheme. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. For detailed derivative strategies, please refer to SAI.
Risk Profile of the Scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below: 1. Investment in Debt and money market instruments is subject to credit risk, liquidity risk, interest rate risk, reinvestment risk, risk associated with unrated debt instruments etc. 2. Investment in securitized debt is subject to liquidity risk, limited recourse risk, Delinquency & Credit Risk, Risks due to possible prepayments, risk due to bankruptcy of the Originator or Seller etc. 3. Equity and Equity related instruments are volatile in nature and are subject to price fluctuations on daily basis. 4. Risk associated with derivatives: Since investments would be made in derivatives such as options & futures, the risks associated with such derivatives would be applicable. 5. Risk associated with Securities Lending: If the Scheme undertakes Securities lending under the regulations, it may be exposed to the risks inherent to securities lending, including the risk of failure of the other party. 6. Risks associated with investing in ADR/GDR/Foreign Securities: Investments in ADR/GDR/Foreign Securities carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.

	7. Risk factors associated with repo transactions in corporate debt securities: Corporate Bond Repo transactions are currently done on OTC basis and settled on non-guaranteed basis. Thus, the scheme is exposed to Credit risk on failure of the counter party to repurchase the security as contracted. 8. Risk associated with investment in mutual fund units & ETFs: Investment in ETFs is subject to tracking error. Factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies may affect the AMC's ability to achieve close correlation with the Underlying Index of the Scheme. 9. Risks associated with investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities: SO rated securities are often complex structures, with a variety of credit enhancements. The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. The instruments might be subject to Liquidity risk, Issuer level & structure related Credit risk. 10. Risk factors associated with investments in REITs and InvITs: Risk of lower than expected distributions. The distributions by the REIT or InvIT will be based on the net cash flows available for distribution. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. 11. Risk factors associated with imperfect hedge using Interest Rate Futures: The cost of hedge can be higher than adverse impact of market movements Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market; this may lead to the hedging position not giving the exact desired hedge result. Derivatives will entail a counter-party risk to the extent of amount that can become due from the party. 12. The Scheme is also subjected to risk factors such as Risks associated with writing covered call options for equity shares, Segregated Portfolio, Structured Obligations such as corporate / promoter guarantee, and risk factors associated with instruments having special features etc as detailed in the SID.
Risk Control	Investments in equity, debt and money market instruments carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification. In order to mitigate the various risks, the portfolio of the scheme will be constructed in accordance with the investment restriction specified under the SEBI (MF) Regulations which would help in mitigating certain risks relating to investments in securities market. Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants. **For risk control, the following may be noted:** **Liquidity risks:** The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities. **Interest Rate Risk:** Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk. **Volatility risks:** There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy, etc. The scheme will manage volatility risk through diversification. To that extent the volatility risk will be mitigated in the scheme.

Credit Risk: Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.

Further, the Investment Manager endeavours to invest in InvITs where adequate due diligence and research has been performed by the Investment Manager. The Investment Manager also relies on its own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, etc.
